#### Preface

In the last several years great strides have been made by law enforcement in developing and implementing statewide programs to collect meaningful crime statistics. The FBI is presently receiving Uniform Crime Reports data from central state sources in ten states and is assisting in the development of similar programs in an additional ten states for implementation in 1972. These programs are an integral part of central state systems designed to provide criminal justice information services. Statistical data on crime and the basic activities of the criminal justice agencies are essential to each state if it is to intelligently analyze the crime problem, plan for and evaluate the criminal justice response.

Vital to the success of these state programs are adequate field staffs to assist local agencies by counseling them in proper records management and crime reporting practices. Administrative services of this kind provided by the state agency should include periodic audits since conclusions drawn and decisions made from the statistical information are only as valid as the reliability of the data base.

The National Crime Information Center and its related state computer systems, while initially established as operational information systems, will increasingly provide valuable statistical information as a by-product. With the addition, in the near future, of offenders' criminal history records, a ready source becomes available for in depth research, particularly that aimed at evaluating criminal justice measures. Progress is being made in adapting new technology to meet the needs in this area, however, it must be again stressed that proper and accurate recording of data is vital. We all share a most important responsibility to constantly improve on identification, communication, information collecting and processing techniques if we expect to derive from these systems more meaningful and rewarding results.

J. Edgar Hooner

JOHN EDGAR HOOVER, Director

#### Crime Factors

Uniform Crime Reports give a nationwide view of crime based on police statistics made possible by the voluntary cooperation of local law enforcement agencies. Since the factors which cause crime are many and vary from place to place, readers are cautioned against drawing conclusions from direct comparisons of crime figures between individual communities without first considering the factors involved. The national material summarized in this publication should be used, however, as a starting point to determine deviations of individual cities from the national averages.

Crime is a social problem and the concern of the entire community. The law enforcement effort is limited to factors within its control. Some of the conditions which will affect the amount and type of crime that occurs from place to place are briefly outlined below:

Density and size of the community population and the metropolitan area of which it is a part.

Composition of the population with reference particularly to age, sex and race.

Economic status and mores of the population.

Relative stability of population, including commuters, seasonal, and other transient types.

Climate, including seasonal weather conditions.

Educational, recreational, and religious characteristics.

Effective strength of the police force.

Standards governing appointments to the police force.

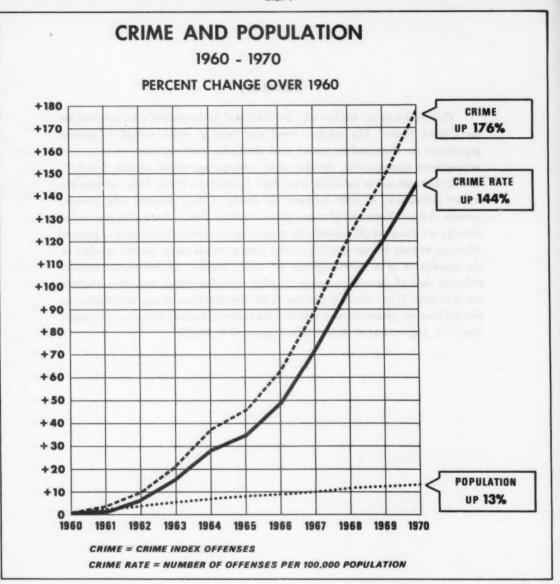

Policies of the prosecuting officials and the courts.

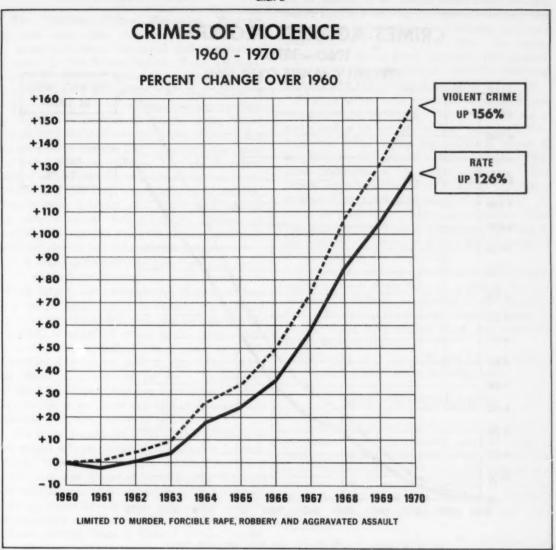

Attitude of the public toward law enforcement problems.

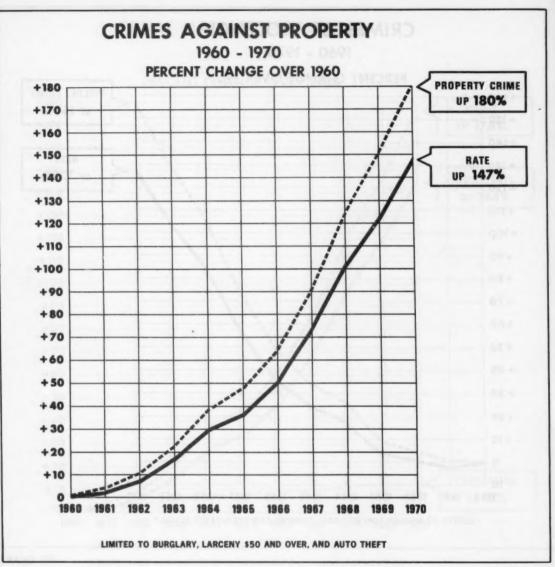

The administrative and investigative efficiency of the local law enforcement agency, including the degree of adherence to crime reporting standards.

#### Summary

This section is for readers who are interested in the general crime picture for the United States. The volume, trend and rate of crime related to current population are discussed in context with the Crime Index offenses—murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny \$50 and over in value and auto theft. In addition, Crime Index offenses are treated individually to better delineate the nature of these criminal acts. Arrests, persons charged, clearances of crime, police employee data, police killed, and police assaults are discussed. Statistical data concerning the criminal recidivism of persons who have at least on one occasion during their criminal career become involved in the commission of a federal offense are also examined. In subsequent sections technical data of interest primarily to police, social scientists and other students are presented. If you desire assistance in the interpretation of any information in this publication, please communicate with the Director, Federal Bureau of Investigation, U.S. Department of Justice, Washington, D.C. 20535.

#### CRIME INDEX TOTALS

The Uniform Crime Reporting Program employs seven crime classifications to establish an index to measure the trend and distribution of crime in the United States. These crimesmurder, forcible rape, robbery, aggravated assault, burglary, larceny \$50 and over in value, and auto theft-are counted by law enforcement agencies as the crimes become known to them. These crimes were selected for use in the Crime Index because, as a group, they represent the most common local crime problem. They are all serious crimes, either by their very nature or due to the volume in which they occur. Offenses of murder, forcible rape, robbery and aggravated assault are categorized as violent crimes. Offenses of burglary, larceny \$50 and over in value, and auto theft are classed as crimes against property.

It is believed desirable to point out that there is no way of determining the total number of crimes which are committed. Many criminal acts occur which are not reported to official sources. In light of this fact, the best source for obtaining a count of crime is the next logical universe, namely, crimes which come to police attention. The crimes used in the Crime Index are those considered to be most consistently reported to police and the computations of crime trends and crime rates are prepared using this universe—offenses known to police.

The crime counts set forth in this publication are actual offenses established by police investigation. When police receive a complaint of a crime and the follow-up investigation discloses no crime occurred it is "unfounded." On a national average, police investigations "unfound" 4 percent of the citizen complaints concerning Crime Index offenses ranging from 3 percent in the larceny classification to 18 percent in forcible rape complaints. Unfounded complaints are eliminated from these crime counts.

In calendar year 1970 an estimated 5,568,200 Index offenses were reported to law enforcement agencies, an 11 percent increase over 1969. The violent crimes as a group made up 13 percent of the Crime Index total and rose 12 percent, with murder up 8 percent, forcible rape 2 percent, robbery 17 percent, and aggravated assault 8 percent. Each of the voluminous property crimes recorded an increase, which contributed to the 11 percent rise in this group of offenses represent-

ing 87 percent of the Crime Index total. Individually, burglary was up 11 percent, larceny \$50 and over in value increased 15 percent, and auto theft was up 6 percent. Since 1960, the violent crimes as a group have increased 156 percent, property crimes 180 percent, and the combined Crime Index 176 percent in volume.

As in prior years the suburban areas continued to show an above average rise in the volume of crime with a 14 percent increase over 1969. The large core cities having populations in excess of 250,000 were up 6 percent in volume and the rural areas registered a 15 percent upswing. The largest American cities over 1 million population registered an average increase of 8 percent. As noted in prior issues, while the suburban areas continued to record sharp percentage upswings in the volume of crime, a much higher level of crime occurs in the large cities.

Crime increases were noted in each crime classification and each geographic region with the volume of crime in 1970 up 14 percent in the Southern States, 12 percent in the North Central States, 11 percent in the Northeastern States, and 9 percent in the Western States.

Estimated 1970 crime figures for the United States are set forth in the following table.

#### CRIME AND POPULATION

Crime rates relate the incidence of crime to population. From a realistic point of view, a crime rate should be considered as a victim risk rate. The discussion that follows will demonstrate that the risk of becoming a victim of crime in this country is increasing and that population growth cannot alone account for the crime increases.

The Crime Index rate for the United States rose from 2,477 offenses per 100,000 inhabitants in 1969 to 2,740 in 1970, an 11 percent increase in the victim rate. The national crime rate, or the risk of being a victim of one of these crimes, has increased 144 percent since 1960. Many factors influence the nature and extent of crime in a particular community. A number of these factors are shown on page vii of this publication. A crime rate only takes into consideration the numerical factor of population and does not incorporate any of the other elements which contribute to the amount of crime in a given area. The statistical

	921, 400	453. 5	+5.7	+5.0	+86. 9	+78. 3	+182.9	+149.7	

tables in this publication disclose the varying crime experiences, especially among large cities and suburban communities, are affected by a complex set of involved factors and are not solely limited to numerical population differences. The text tables set forth on these pages reveal the variation in crime experience by geographic region and particularly large core cities as contrasted with the suburban and rural areas.

The above table discloses each crime category recorded a rate increase ranging from 1 percent in forcible rape to 16 percent in robbery offenses. The number of crimes per unit of population is, as expected, highest in the large metropolitan centers and in those areas where the population is rapidly increasing.

The accompanying charts illustrate the trend of crime in the United States for 1960 through 1970 by showing percentage changes in volume and rate of crime together with the population increase.

Crime Rate by Area, 1970

[Rate per 100,000 inhabitants]

	Area							
Crime Index offenses	Total U.S.	Cities over 250,000	Subur- ban	Rural				
Total	2,740.5	5, 335. 1	2, 137. 0	927. 4				
Violent	360.0	980. 4	176.7	120.0

Auto theft	871. 9	419.3	327.1	570. 2

Separate charts provide similar information relative to crimes of violence and crimes against property. Since 1960, the rate for crimes of violence as a group increased 126 percent and property crime rates rose 147 percent.

The reader's attention is directed to the tables containing arrest data which commence on page 119 for additional information on the seven Crime Index offenses, as well as arrest statistics for other criminal acts.

## MURDER AND NONNEGLIGENT MANSLAUGHTER

This Crime Index offense includes all willful killings without due process and is scored on the basis of police investigation as opposed to any decision of a court, coroner, jury or other judicial body. Deaths caused by negligence are not included in this category but are counted as man-

slaughter by negligence. Attempts to kill or assaults to kill are scored as aggravated assaults and not as murder. The crime count for this offense classification also excludes suicides, accidental deaths and justifiable homicides.

ininIn 1970, there were an estimated 15,810 murders committed in the United States. This represents a numerical increase of 1,220 over the 14,590 homicides recorded in 1969. This crime makes up slightly more than 2 percent of the crimes of violence and represents less than one-half of 1 percent of all Crime Index offenses.

The frequency of murder in 1970 was highest

during the period August through December, with August and September representing the high months of the year. In a breakdown by region, 45 percent of the murders in 1970 occurred in the Southern States followed by the North Central States with 23 percent, Northeastern States with 18 percent, and the Western States with 14 percent of the total.

#### Trend

Murder increased 8 percent in 1970 over 1969. The long term trend in this serious crime reveals an increase from 9,000 in 1960 to 15,810 murders in 1970. This is a rise of 76 percent. (Chart 4.)

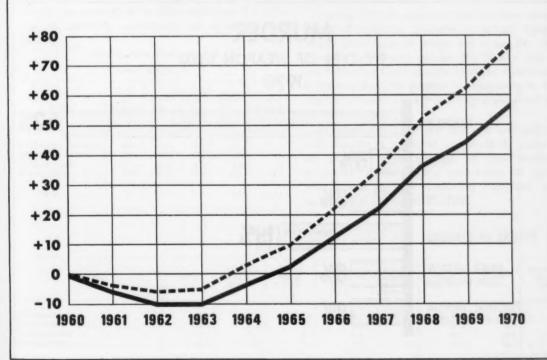

Regionally, murder offenses rose 13 percent in

## MURDER 1960 - 1970

#### PERCENT CHANGE OVER 1960

---- NUMBER OF OFFENSES UP 76 PERCENT

RATE PER 100,000 INHABITANTS UP 56 PERCENT

the Northeastern States, 8 percent in the North Central States, and 7 percent in both the Western and Southern States. Large core cities with 250,000 or more population and suburban areas had an 8 percent rise in the number of murders in 1970, while rural areas experienced a 15 percent increase in the number of murder offenses.

#### Murder Rate

There were 7.8 victims per 100,000 inhabitants in 1970. This is a rise from the 7.2 murder rate recorded in 1969 and represents an 8 percent increase in the murder rate, 1970 over 1969. Nationwide, cities with 250,000 or over in population had a murder rate of 17.5 per 100,000 inhabitants, up 11 percent over 1969. In the suburbs the murder rate was 3.8 per 100,000 while the rate in the rural areas was 6.4 per 100,000 inhabitants.

As in past years, the number of murder victims in proportion to population was highest in the Southern States where the rate of 11.2 was 8 percent above 1969. In the North Central States a rate of 6.5 was 7 percent above the prior year and

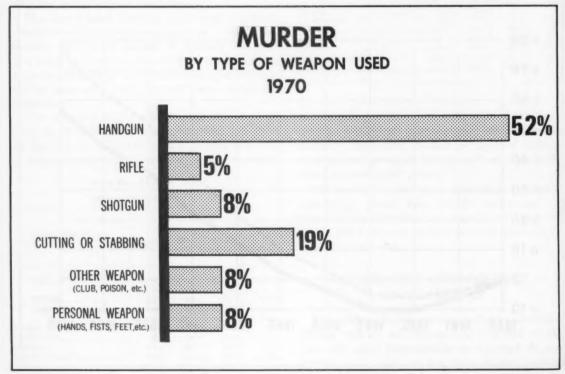

the Western States rate of 6.4 was up 5 percent. The Northeastern States had a rate of 5.8 which was 12 percent higher than the 1969 rate.

#### Nature of Murder

Through the use of a supplemental report, details are collected on murder offenses to obtain data on age, sex, and race of the victims, the weapon used to commit the offenses and the circumstances or motives which lead to the crime.

Males outnumbered females as victims of murder by more than 3 to 1 in 1970, which is similar to the experience in 1969. Nationwide, the ratio of arrests for murder was more than five males to each female. Forty-four of every 100 victims were white and 55 were Negro. The remaining 1 percent was distributed among all other races. It was determined that six out of every ten murder victims were between 20 and 45 years of age, with the largest number, 30 percent, falling in the 20 to 29 age group.

Firearms continue to be the predominant weapon used in murder, as illustrated in the accompanying chart. For the year 1970, as in 1968

and 1969, 65 percent of the homicide victims were killed through the use of a firearm. As in prior years handguns were again the predominate firearm used, with 52 percent of the murders resulting from the use of handguns, 8 percent from the use of shotguns, and 5 percent of the murder victims died from rifle wounds. Cutting or stabbing weapons were used in 19 percent of the murders, other weapons (blunt objects such as hammers and clubs, poison, arson, explosives, drowning, etc.) in 8 percent, and in the remaining 8 percent of the murders, personal weapons such as hands, fists and feet were used.

An analysis of types of murder weapons by region shows that in 1970 the Southern States led in homicides by use of firearms with seven of every ten victims succumbing from gunshot wounds. Knives or other cutting instruments were used most frequently as murder weapons in the Northeastern States where three out of every ten homicide victims died of cut or stab wounds. The use of personal weapons resulting in murder by strangulation and internal injuries was highest in the Northeastern States and lowest in the Southern States. Since 1964, murder through the use of a firearm has more than doubled while use of a cutting or stabbing instrument has increased 35 percent.

#### Murder, type of weapon used

[Percent distribution]

Region	Total all weapons used	Fire- arms	Knife or other cutting instru- ment	Other weapon; club, poison, etc.	Personal weapons
Northeastern States	100.0	49.9	28.3	9.9	11.9
North Central States	100.0	70.6	15.6	5.9	7.9
Southern States	100.0	73.1	16.3	5.6	5.0
Western States	100.0	56. 6	18.4	18.4	11.6
Total	100.0	65. 4	18.9	7.6	8.1

As it has been pointed out in prior issues of this publication, police are powerless to prevent a large number of these crimes, which is made readily apparent from the circumstances or motives which surround criminal homicide. The significant fact emerges that most murders are committed by relatives of the victim or persons acquainted with the victim. It follows, therefore, that criminal homicide is, to a major extent, a national social problem beyond police prevention. In 1970, killings within the family made up about onefourth of all murders. Over one-half of these involved spouse killing spouse and the remainder involved other family killings such as parents killing children and other in-family relationship type murders. In this Program, felony murder is defined as those killings resulting from robberies, sex motives, gangland slayings, and other felonious activities. These known and suspected felonious killings comprise 29 percent of the total murder offenses in 1970, up from 27 percent in 1969 and 25 percent known or suspected felonious homicides in 1968. The following table demonstrates by geographic region the percentage of murder by type or circumstance in 1970.

During 1970, 7 percent of the murders were the result of romantic triangles or lovers' quarrels. More than four of every ten were the direct result of arguments outside the family unit and not involving the romantic triangle situations. It is known that the persons participating in these arguments were most frequently acquainted prior to the fatal act.

In situations involving husband and wife, the wife was the victim in 54 percent of the cases and the husband in 46 percent. In these incidents, 47 percent of the victims were white, 52 percent were Negro and the remaining 1 percent other race or race not stated.

#### Murder by circumstance

[Percent distribution]

Region	Total	Spouse killing spouse	Parent killing child	Other family killings	Romantic triangle and lovers quarrels	Other arguments	Known felony type	Suspected felony type
Northeastern States	100.0	9.6	3.7	6.1	7.9	38.4	25.4	8.9
North Central States	100.0	11.8	3.0	8.9	5.0	39. 5	22.4	9. 9
Southern States	100.0	18.8	2.2	8.8	8.4	46.0	13.9	6.9
Western States	100, 0	12.5	4.9	7.0	6.4	32.2	28. 0	9.0
Total	100, 0	12.1	3.1	8.1	7.1	40, 8	20. 4	8.4

In lovers' quarrels, the females were the victims in 55 percent of the murders, but when a third party entered the scene to complete a romantic triangle, a male was the victim in 93 percent of the confrontations.

The victims of felony-type murders were 64 percent white, 35 percent Negro, and 1 percent other race or race not stated.

#### Clearances

Nationwide, police continue to be successful in clearing or solving by arrest a higher percentage of the murder cases than any other Crime Index offense. In 1970, 86 percent of the criminal homicides were solved. Persons under 18 years of age were involved in 6 percent of the willful killings solved by the police.

#### Persons Arrested

Based on reports submitted by law enforcement agencies, 10 percent of all persons arrested for murder were under 18 years of age, and 43 percent were under 25. The involvement of the young age group under 18 years of age is indicated in the long-term arrest trends for murder, 1960-1970, where a 203 percent increase occurred. The increase in adult arrests for murder during this period was 94 percent. Numerically, the 20 to 24 year age group had the heaviest involvement during 1970 with 23 percent of the total arrests coming from within this age group. Negroes made up 60 percent of the arrests for murder in 1970. and 55 percent of the victims of homicide were also Negroes. There was an 8 percent increase in the number of arrests of females for murder in 1970.

#### Persons Charged

Law enforcement agencies' reports disclose that 67 percent of all adults charged with murder in 1970 were prosecuted during the year. Forty-four percent of the adults prosecuted were found guilty as charged, and 15 percent were convicted on some lesser charge. The remaining 41 percent won release by acquittal or dismissal of the charges against them. Of all individuals processed for murder, 12 percent were juveniles who had their cases referred to juvenile court jurisdiction.

#### AGGRAVATED ASSAULT

Aggravated assault is defined as an unlawful attack by one person upon another for the purpose of inflicting severe bodily injury usually accom-

panied by the use of a weapon or other means likely to produce death or serious bodily harm. Attempts are included since it is not necessary that an injury result when a gun, knife, or other weapon is used which could and probably would result in serious personal injury if the crime was successfully completed.

#### Volume

In calendar year 1970, there was an estimated total of 329,940 aggravated assaults. This is an increase of 23,520 offenses over the previous year. This violent crime against the person made up over 6 percent of the Crime Index offenses in 1970 and comprised 45 percent of the crimes of violence. Regionally, the Southern States recorded 38 percent of the total count of these crimes followed by the North Central States 22 percent, while the Northeastern and Western States each accounted for 20 percent. As has been the experience in prior years, the warm summer months recorded the high frequencies during 1970. (See Chart 14.)

#### Trend

. In 1970, the volume of aggravated assault offenses increased 8 percent over 1969 and 117 percent over 1960. Cities with 250,000 inhabitants and over had a 3 percent increase in volume. The suburban areas reported a 12 percent rise and rural areas were up 7 percent. The Western States reported an upward trend of 9 percent while North Central States registered an increase of 5 percent. The Northeastern and Southern States each recorded an increase of 8 percent.

#### Aggravated Assault Rate

For each 100,000 persons in the United States during 1970, there were 162 victims of aggravated assault. Large core cities 250,000 and over in population recorded a victim rate of 334 per 100,000, suburban 102, and rural areas 90. Overall, the victim rate for aggravated assault increased 7 percent over 1969, and 92 percent over 1960. (See Chart 6.) The Southern States were again highest with a rate of 203 per 100,000 followed by the Western States 187, Northeastern States 134, and the North Central States 127. This victim rate was up 5 percent in large core cities while the suburban area rate was up 7 percent and the rural area 5 percent.

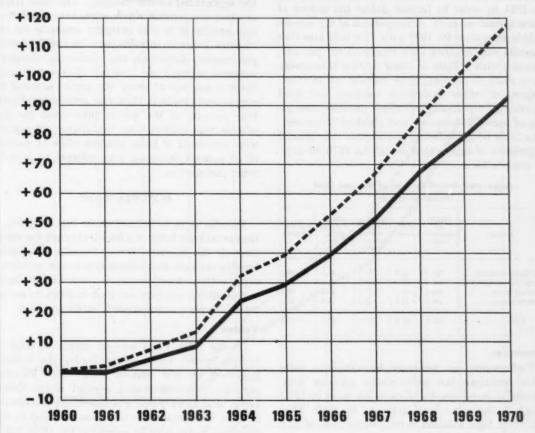

#### Nature of Aggravated Assault

Most aggravated assaults occur within the family unit, or among neighbors or acquaintances.

## AGGRAVATED ASSAULT 1960 - 1970

#### PERCENT CHANGE OVER 1960

The victim and offender relationship, as well as the very nature of the attack makes this crime similar to murder. In 1970, 24 percent of the serious assaults were committed with the use of a firearm. A knife or other cutting instrument was used in 28 percent of the assaults, 24 percent were committed with blunt objects or other dangerous weapons, and 23 percent with personal weapons, such as hands, fists and feet. The collection of crime counts in this offense category was broken down into the above subclassifications commencing in 1964 in order to further define the nature of these serious assaults. A comparison of the assault subclassifications for 1970 with 1964 indicates that assaults with firearms have increased 167 percent: assaults with a knife or other cutting instrument have risen 15 percent; those assaults where blunt objects or other dangerous weapons are used increased 75 percent, and those assaults through use of personal weapons have climbed 75 percent. The table which follows demonstrates the regional experience of aggravated assault in 1970 by type of weapon used.

Aggravated Assault By Type of Weapon Used
[Percent distribution]

Region	Total all weapons used	Fire- arms	Knife or other cutting instru- ment	Other weapon; club, poison, etc.	Personal weapons
Northeastern States	100.0	16.8	31. 3	31. 6	20. 3
North Central States	100.0	27. 9	26.7	20.8	24, 6
Southern States	100.0	27.7	29, 2	19.9	23. 2
Western States	100. 0	22.3	23. 9	28. 4	25. 4
Total	100.0	24. 8	28.0	24. 4	23. 8

#### Clearances

Performance, as measured by solutions, indicates American law enforcement agencies were successful in solving 65 of each 100 cases in 1970 which is the same level achieved in 1969. This relatively high solution ratio follows that of the other crimes against the person. Persons under 18 years of age were identified in 10 percent of these clearances. Due to the nature of these crimes, arrests are frequently made upon the response of patrol units. This type of patrol call is hazardous to the officers. Since 1961, 98 officers have lost their lives responding to disturbance-type calls, which frequently involve family arguments.

#### Persons Arrested

Comparing aggravated assault arrests for 1970 with those in 1960 indicates that arrests of young

persons under 18 increased 133 percent while arrests of adults were up 54 percent. As a group, persons 21 years of age and over accounted for 70 percent of the arrests for aggravated assault in 1970 and those under age 21 accounted for 30 percent. Arrests of males outnumbered females by about 7 to 1.

#### Persons Charged

Law enforcement agencies have difficulty in obtaining convictions based on original charge in the aggravated assault category. The close family or other relationship which exists between victims and assailants in this category accounts for the victim's frequent unwillingness to testify for the prosecution. Acquittals and dismissals, therefore, continue to run high, four out of each ten cases. Seventy-one out of every 100 adults arrested for aggravated assault in 1970 were prosecuted. Forty-four percent of the adults prosecuted for this offense were convicted on this charge, 16 percent were convicted of lesser charges while 18 percent of all persons processed were referred to juvenile court jurisdiction.

#### FORCIBLE RAPE

Forcible rape, as defined under this Program, is the carnal knowledge of a female through the use of force or the threat of force. Assaults to commit forcible rape are also included; however, statutory rape (without force) is not counted. Crime counts in this offense category are broken down by actual forcible rapes and attempted forcible rapes.

#### Volume

During 1970, there was an estimated total of 37,270 forcible rapes. Numerically, the volume increased by 800 offenses over 1969. Forcible rape made up less than 1 percent of the Crime Index total and 5 percent of the crimes of violence in 1970. The greatest volume was recorded in the Southern States with 30 percent of the total, while the Western States recorded 27 percent, the North Central States 26 percent and the Northeastern States 17 percent.

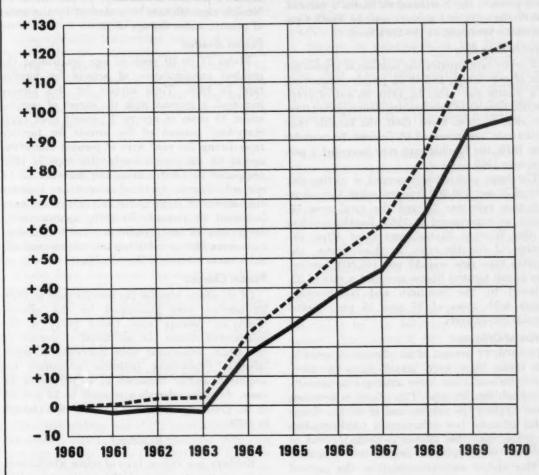

A comparison of the month-to-month variations of forcible rape in 1970 with the long-term seasonally adjusted trend followed the pattern set for many years. Chart 14 reflects the month-to-month variations of forcible rape during 1970, as well as a comparison with the prior 5-year experience.

## FORCIBLE RAPE

1960 - 1970

#### PERCENT CHANGE OVER 1960

RATE PER 100,000 INHABITANTS UP 95 PERCENT

#### Trend

The volume of forcible rape offenses in 1970 increased 2 percent over 1969, and 121 percent over 1960. This crime was committed most often in the big cities with 250,000 or more inhabitants which accounts for 45 percent of the forcible rapes. In 1970, this group of cities registered a one percent increase and the suburban areas also were up 1 percent. A rise of 5 percent was recorded in the rural areas. Geographically, the Southern States were up 5 percent, the Northeastern States 2 percent, the Western States 1 percent and the North Central States remained at the 1969 level.

#### Forcible Rape Rate

A crime rate equates the number of crimes per unit of population, and in its proper perspective, is a victim risk rate. In 1970, 36 out of every 100,000 females in this country were reported forcible rape victims. Since 1960, the forcible rape victim rate has increased 95 percent. In calendar year 1970, the forcible rape rate increased 1 percent over 1969.

The large core cities recorded a victim risk rate of 77 per 100,000 females, while the suburban area rate was 25 and the rural area 19. Again, as experienced in 1969, females residing in the Western States were most often the victims of forcible rape. In these States, the forcible rape rate was 56 per 100,000 females. The North Central States recorded a rate of 33, followed by the Southern and Northeastern States with rates of 35 and 25 per 100,000 females respectively.

#### Nature of Offenses

In 1970, 71 percent of all offenses reported in this crime class were actual rapes by force while the remainder were attempts or assaults to commit forcible rape. This offense is a violent crime against the person, and of all the Crime Index offenses, law enforcement administrators recognize that this offense is probably one of the most under-reported crimes due primarily to fear and/or embarrassment on the part of the victims. As a national average, 18 percent of all forcible rapes reported to police were determined by investigation to be unfounded. In other words, the police established that no forcible rape offense or attempt occurred. This is caused primarily due to the question of the use of force or threat of force frequently complicated by a prior relationship between victim and offender. Crime counts in this publication are limited to actual offenses established by police investigation.

#### Clearances

The solution rate in 1970 was 56 percent which is a 0.9 percent increase over the clearance rate achieved in 1969. The large cities with 250,000 or more inhabitants had a solution rate of 56 percent while the suburban law enforcement agencies solved 52 percent and the rural areas 70 percent. Nationally, 13 percent of the forcible rape offenses were cleared by the arrest of persons under the age of 18.

#### Persons Arrested

Males 17 to 20 years of age constituted the greatest concentration of arrests for forcible rape in 1970. Total arrests for this offense increased 1 percent with the arrest of persons under 18 years of age up 3 percent over 1969. Sixty-four percent of the arrests for forcible rape during the year were of persons under the age of 25. All arrests for forcible rape in 1970 compared to 1960 indicate an increase of 55 percent. Figures for the same years indicate that arrests of those under 18 years of age have increased 85 percent. In 1970, approximately 48 percent of the persons arrested for forcible rape were Negroes, 50 percent whites, and all other races comprised the remainder.

#### Persons Charged

Of all adults arrested for forcible rape in 1970, 70 percent were prosecuted for this offense. Thirty-six percent were found guilty of the substantive offense. An additional 18 percent of the adults prosecuted were convicted of lesser offenses. Prosecutive problems accounted for acquittals and/or dismissals in 46 percent of the cases. Juvenile referrals amounted to 22 percent of the persons processed on forcible rape charges in 1970.

#### ROBBERY

Robbery is a vicious type of crime which takes place in the presence of the victim to obtain property or a thing of value from a person by use of force or threat of force. Assault to rob and attempts are included. This is a violent crime and frequently results in injury to the victim. For crime reporting purposes data on robbery is collected for armed robbery where any weapon is used, and strong-arm robbery where no weapon other than a personal weapon, is employed. The

latter category includes crimes such as mugging, yoking, etc.

#### Volume

During calendar year 1970, there were an estimated 348,380 robberies committed in the United States. This represents a significant increase over the 297,580 robberies which occurred in calendar year 1969. This offense makes up 6 percent of the total Crime Index and comprises 48 percent of the crimes of violence. In 1970, these offenses occurred most frequently during the period August through December.

Geographically, the heaviest volume of robbery occurred in the Northeastern States, which reported 33 percent of the total in 1970. The percentage distribution in the other geographic regions showed the North Central States had 28 percent, the Southern States 23 percent, and the Western States 16 percent.

#### Trend

In 1970 robbery offenses increased 17 percent in volume when compared with 1969. Since 1960, robbery has increased 224 percent. Large core cities with over 250,000 population witnessed a 16 percent rise in the volume of robbery. Suburban areas surrounding the large core cities recorded a 20 percent increase while the rural areas reported an upward trend of 14 percent.

There were substantial increases in robbery in each geographic region. The Northeastern States had the sharpest increase with a 24 percent rise, while the North Central States were up 17 percent, the Southern States 16 percent, and the Western States 6 percent.

The accompanying chart depicts the long-term trend in the volume of robbery and the robbery rate, 1960-1970.

#### Robbery Rate

The 1970 robbery rate of 171 victims per 100,000 inhabitants was 16 percent above the 1969 rate and 186 percent above the 1960 rate. Robbery is a big city crime. American cities with over 250,000 population accounted for nearly three out of every four robberies which occurred in the United States during 1970.

Cities with over 250,000 inhabitants had a robbery rate of 589 victims per 100,000 inhabitants. There were 58 robbery victims per 100,000 in the surburban areas, up 16 percent over the preceding year, and 14 victims in the rural portions of the country. Robbery rates in the

#### Robbery by Geographic Region

	Total	North- eastern	North Central	Southern	Western
Armed—any weapon Strong-arm—no weapon.	63.3	65. 6 34. 4	61. 5 38. 5	63.3 36.7	61. 6 38. 4
Total	100.0	100. 0	100.0	100.0	100. 0

larger cities were about 10 times greater than they were in the suburban areas, again pointing out the fact that robbery rates tend to increase in proportion to density of population. On a geographic basis, this crime occurred most frequently in relation to population in the Northeastern States where the rate was 233, 23 percent higher than 1969. The North Central States followed with a rate of 173, which was a 16 percent increase, the Western States 157, a 4 percent rise, and the Southern States 130, a 16 percent increase.

#### Nature of Robbery

Supplemental information is obtained from cities with populations of 2,500 or more as to robbery by type as a part of the monthly collection of statistical data under this Program. In 1970, these figures disclosed that 55 percent of the robberies were committed in the street. Nationally, bank robbery offenses increased 29 percent, but continued to account for less than one percent of total robbery. The average bank robbery dollar loss decreased from \$4,526 in 1969 to \$4,166 in 1970.

The long-term trends in robbery by type as illustrated by the following charts show bank robbery has increased 409 percent since 1960. During this same period, gas or service station holdups have increased 230 percent, chain store robberies 389 percent, street robberies 229 percent, robberies in residences 213 percent, and holdups of other commercial or business establishments rose 144 percent.

Armed perpetrators were responsible for 6 and of every 10 robbery offenses during 1970, while 2 percent were muggings, yokings, or other violent confrontations where personal weapons were used to subdue or overcome the victim. Since 1964, armed robbery has increased 198 percent and unarmed robbery increased 129 percent.

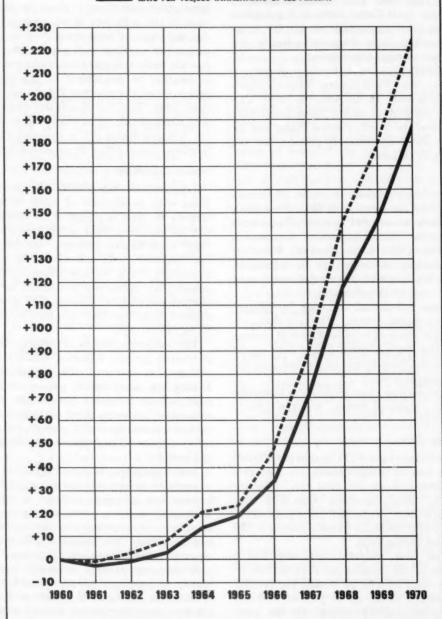

Special surveys have indicated that approximately 63 percent of all armed robbery is committed with a firearm, 24 percent with a knife or other cutting instrument, and 13 percent with blunt objects such as clubs, etc.

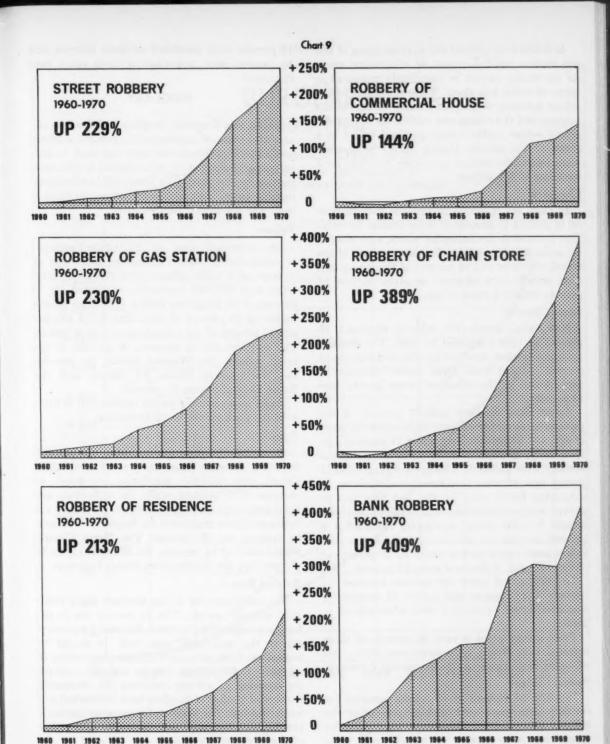

## **ROBBERY**

1960 - 1970

#### **PERCENT CHANGE OVER 1960**

RATE PER 100,000 INHABITANTS UP 186 PERCENT

As it has been pointed out in prior issues of this publication, the full impact of this violent crime on the victim cannot be completely measured in terms of dollar loss alone. While the object of the attack is money or property, many victims of the mugger and the strong-arm robber, as well as the armed robber, suffer serious personal injury as a result of the attack. During 1970, the average value loss to the victims of robbery was \$235 for a total loss of \$82 million.

#### Clearances

In 1970, law enforcement agencies were successful in solving 29 percent of these crimes. Seventynine percent of the robberies which were cleared by arrest involved adults. Fourteen percent of the armed robberies and 32 percent of the strong-arm type which were cleared, involved arrests of persons under 18 years of age.

#### Persons Arrested

Nationally, arrests for robbery increased 10 percent in 1970 compared to 1969. The greatest volume of arrests occurred in cities and were up 10 percent. In the rural areas arrests increased 5 percent and in the suburban areas arrests rose 14 percent.

Arrest data discloses that 77 percent of the persons arrested for robbery were under 25 years of age, and 57 percent were under 21 years of age. Nationally, 33 percent of the persons arrested for robbery were under 18. This greater proportion of young age arrests, compared to solutions, is accounted for in part by the fact they act in groups such as in strong-arm robbery. Robbery arrests for this young age group recorded a 9 percent increase in 1970 over 1969. In the suburban areas young persons made up 27 percent of the arrests, and in the rural areas 15 percent.

In 1970, six of every 100 persons arrested for robbery were females and arrests of women for this offense rose 8 percent in 1970 when related to 1969.

From a standpoint of race, 65 percent of those arrested were Negro, 33 percent were white, and all other races made up the remaining 2 percent.

#### Persons Charged

In 1970, 57 percent of all adults arrested for robbery were prosecuted, and 41 percent of the persons processed for this crime were juveniles whose cases were referred to juvenile court jurisdiction. Of the adults prosecuted in 1970, 47 percent were convicted of the substantive charge,

13 percent were convicted on lesser charges, and 40 percent were acquitted or their cases were dismissed.

#### BURGLARY

Under this Program, burglary is defined as the unlawful entry of a structure to commit a felony or theft, even though no force was used to gain entrance. Collection of crime counts in this category is broken down into three subclassifications: forcible entry, unlawful entry where no force is used, and attempted forcible entry.

#### Volume

An estimated total of 2,169,300 burglaries occurred during 1970. Volumewise, there was an increase of 219,500 offenses over 1969. The large cities over 250,000 population accounted for 38 percent of all burglaries during 1970. This offense makes up 39 percent of the Crime Index offenses and 45 percent of the voluminous property crimes. The Southern States reported 28 percent of the total volume, the Western States, 25 percent, the Northeastern States, 24 percent and the North Central States, 23 percent.

Highs were recorded during the last half of 1970, with the peak month being December.

#### Trend

Since 1960, burglary has increased 142 percent. In 1970, burglary rose 11 percent over 1969. Cities over 250,000 population recorded an increase of 7 percent while the suburban and rural areas were each up 12 percent. By region, the Southern States registered the largest overall gain in volume; up 14 percent. The North Central States were up 12 percent, the Western States 10 percent and the Northeastern States 9 percent.

#### **Burglary Rate**

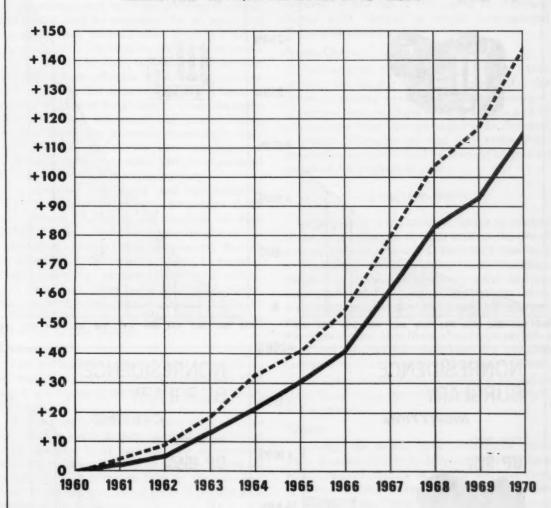

The long-term rise in the burglary rate, 1960–1970 was 113 percent. The 11 percent rise in the burglary rate, 1970 over 1969, followed a 6 percent rise in the rate, 1969 over 1968. It should be remembered the crime rate equates the number of offenses per 100,000 inhabitants and this continuing upswing in volume indicates the increasing number of victims of burglary both residential and nonresidential. The Western States again recorded the highest burglary rate in 1970 with 1,542 offenses per 100,000 inhabitants followed by the Northeastern States with a rate of 1,065, the Southern States 961 and North Central States 897.

## **BURGLARY**

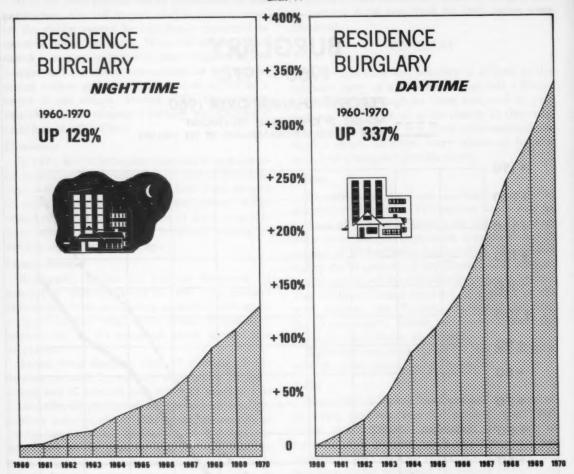

1960 - 1970

#### **PERCENT CHANGE OVER 1960**

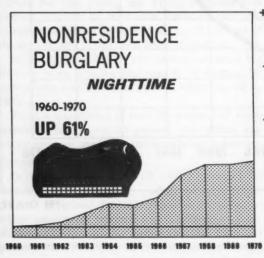

NUMBER OF OFFENSES UP 142 PERCENT
RATE PER 100,000 INHABITANTS UP 113 PERCENT

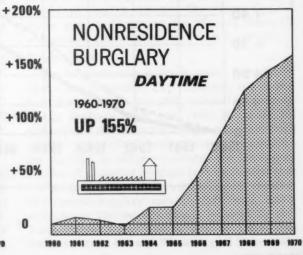

0

C

Core cities over 250,000 population recorded a rate of 1,948 per 100,000 inhabitants while the suburban and rural areas had rates of 872 and 434 respectively.

#### Nature of Burglary

As it has been pointed out in prior issues, burglary is a crime of stealth and opportunity committed by amateurs and professionals alike. In 1970, 77 percent of the burglaries involved forcible entry, while 17 percent were unlawful entry (without force) and 6 percent were attempts. Residential burglary accounted for 58 percent of the total while nonresidential amounted to 42 percent in 1970. Daytime burglaries of residences rose 13 percent in 1970, and accounted for over one-half of these offenses. Since 1960, there has been a substantial increase of 337 percent in daytime residential burglaries. It should be noted that unattended apartments and homes during daytime hours are becoming increasingly easy prey for the burglar. Daytime burglaries of nonresidences rose 7 percent in 1970, but accounted for only 6 percent of the total burglary.

As a group, residential and nonresidential nighttime burglary represented 62 percent of the total volume. Prevention and detection are most difficult for law enforcement agencies due to the tremendous volume of these offenses and the lack of adequate police patrols. In 1970, property owners suffered an economic loss of \$672 million, with an average dollar loss of \$310 per burglary. Residential burglary losses amounted to \$407 million while nonresidential losses due to burglaries amounted to \$265 million.

#### Clearances

Law enforcement agencies were successful in solving 19 percent of the burglary offenses in 1970 which is a 3 percent increase over the 1969 clearance rate.

Adults were identified in 63 percent of all cases solved while young persons under 18 years of age were identified in 37 percent. Law enforcement agencies in cities 250,000 and above solved 22 percent of these crimes in 1970. In the suburban areas 16 percent were solved while 21 percent were cleared in the rural areas.

#### Persons Arrested

In 1970, total arrests for burglary increased 6 percent. Arrests of persons under 18 years of age increased 2 percent and arrests of persons 18 years and over rose 11 percent. Burglary arrests increased 5 percent in the cities, 6 percent in suburban areas,

and rural areas recorded an 11 percent increase. An analysis of the period 1960-1970, reveals a 62 percent increase in burglary arrests. Arrests of individuals under the age of 18 increased 72 percent, while arrests of adult burglary offenders increased 52 percent, 1960-1970.

Nationally, persons under 25 accounted for 83 percent of all arrests for burglary in 1970. Of the total, young persons under 18 accounted for 52 percent of all arrests for this crime. Females were involved in five out of 100 arrests for burglary during 1970. Arrests of whites outnumbered Negroes by almost 2 to 1.

#### Persons Charged

Nationally, in 1970, 70 percent of the adults arrested for burglary were prosecuted. Of the adults, 53 percent were found guilty as charged, 17 percent were convicted of lesser charges and 30 percent were freed through acquittal or dismissal of charges. Juveniles referred to juvenile court jurisdiction accounted for 57 percent of all persons processed for burglary in 1970.

#### LARCENY-THEFT

Larceny-theft is the unlawful taking or stealing of property or articles of value without the use of force or violence or fraud. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from autos, thefts of auto parts and accessories, bicycle thefts, etc. In the Uniform Crime Reporting Program this crime category does not include embezzlement, "con" games, forgery, and worthless checks. Auto theft, of course, is excluded from this category for crime reporting purposes inasmuch as it is a separate Crime Index offense.

The Crime Index offense of larceny is limited to those thefts where the value of property stolen is \$50 or more.

#### Volume

Larceny, the second most voluminous Index crime is exceeded only by burglary. In 1970 there were 1,746,100 offenses of larceny \$50 and over, up from 1,524,600 in 1969. This crime makes up 31 percent of the Crime Index total. From a seasonal standpoint, larceny was highest in the summer months and reached a peak in August.

The Southern States accounted for 27 percent of larceny-thefts while the Western and North Central States each contributed 25 percent, and the Northeastern States 23 percent.

#### Trend

In 1970, the Index offense of larceny \$50 and over, recorded a 15 percent increase over 1969 and 245 percent over 1960. Substantial increases were noted in all population groups with cities over 250,000 population up 5 percent. The suburban areas increased 19 percent and the rural areas registered a 25 percent upward trend.

Geographically, larceny increased 17 percent in the North Central States, 19 percent in the Southern States, and 11 percent in the Western and the Northeastern States.

#### Larceny Rate

During 1970, the larceny crime rate rose to 859 offenses per 100,000 inhabitants, an increase of 14 percent over the 1969 rate and 204 percent over 1960. In 1970, the large core cities registered a crime rate of 1,290 per 100,000 inhabitants. The suburban larceny rate was 801 and the rural rate was 303. Viewed geographically, the Western States reported the highest larceny rate with 1,269 offenses per 100,000 inhabitants which was 8 percent above 1969. The Northeastern States had a rate of 823 up 11 percent; the North Central States 760 up 16 percent, and the Southern States 750 an increase of 20 percent in the rate.

#### Nature of Larceny-Theft

The average value of property stolen in each larceny in 1970 was \$106, up from \$74 in 1960. This average value includes losses from the voluminous thefts under \$50 in value, of which there were 2,500,000 in 1970. When average value is applied to the estimated crimes in this category, the dollar loss to victims was in excess of \$450 million. It is true that a portion of the goods stolen was recovered and returned to victims, but the relatively low percentage of these crimes cleared by arrest, and the lack of specific identification characteristics on such property indicates these recoveries will not materially reduce the overall loss. In addition, of course, many offenses in this category, particularly where the value of the stolen goods is small, never come to police attention.

Since dollar valuation of property stolen in thefts determines whether or not a theft becomes a Crime Index offense, economic conditions are a factor. The rising cost of living with its upward influence on prices, coupled with increased demand for more expensive commodities, present greater criminal opportunity and also exert some unreal effects on the larceny \$50 and

over trend. Likewise, the average value of property stolen in larceny was 43 percent over the 1960 figures. However, the volume of thefts \$50 and over was 245 percent more than the larceny volume recorded in 1960.

The dollar valuation of larceny (larceny \$50 and over in value) as a Crime Index offense has been the subject of discussion by the Committee on Uniform Crime Records of the IACP. In recent years, beginning with the April, 1963, meeting in Washington, D.C., the Committee has considered raising the dollar valuation in order to take account of the increasing cost of living factor. It has been felt, however, that this does not solve the problem but merely postpones it. Furthermore, it does not come to grips at all with the problem of fixing dollar valuation within the thousands of reporting law enforcement agencies.

In the past, discussion has dealt with the possibility of selecting a certain type or types of larceny-theft to be utilized as the Crime Index offense without respect to dollar value. In 1964, the FBI began an expanded collection of data on larceny by type. It should be noted that the percent distribution of larceny by type and area is significant. Likewise, the trend in "street larceny," without relation to dollar loss, suggests a better indicator of this crime experience than the present reporting subdivisions of "larceny \$50 and over in value" and "larceny under \$50 in value". In this regard, it should be noted that the category "street larceny" should include pocket-picking, purse-snatching, thefts from autos, automobile accessories, thefts from coin-operated machines and "all other" larceny.

The term "street larceny" is used to identify this group of thefts since they generally occur within reach of police patrols. When "street thefts" are used collectively, a larceny upswing of 5 percent was registered, 1970 over 1969, and 62 percent, 1970 over 1964. During the same periods, larceny \$50 and over in value increased 15 percent and 139 percent respectively.

In 1970, the average value of goods and property reported stolen from victims of pickpockets was \$80, by purse-snatchers \$47, by shoplifters \$26, by thefts from autos \$139, and by miscellaneous thefts from buildings \$185.

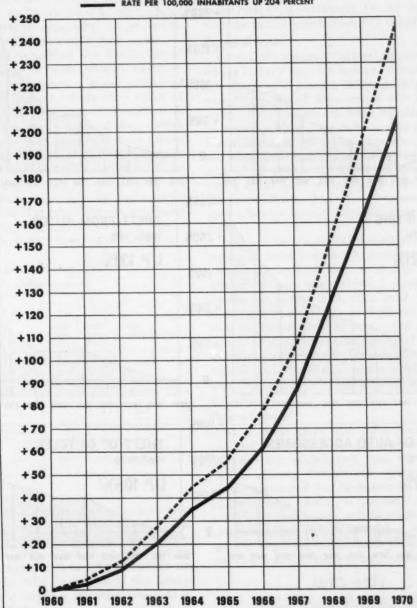

The accompanying table presents distribution of larceny by type for large cities, suburban and rural areas. Cities and suburban areas appear to have similar characteristics except for pocket-picking and purse-snatching which are consider-

lif

Pu Bh Fn Au Bi Fn

C

ably less in the suburban or residential areas. This, of course, is to be expected as these theft opportunities flourish where population and business houses are highly concentrated. It is interesting to note that figures for shoplifting are quite similar in the city and suburban areas while there is a decided drop in the rural area. The shopping center which is still largely absent in rural areas contributes substantially to these figures. Thefts from autos made up 22 percent of larceny in large cities over 250,000 in population, 14 percent in suburban areas and 12 percent in rural areas.

From one year to another, the distribution of larceny as to type of theft remains relatively constant. As in prior years, a major portion of these thefts, 40 percent, represented thefts of auto parts and accessories and other thefts from automobiles. Other major types of thefts which contributed to the large number of these crimes were thefts from buildings, 16 percent, and stolen bicycles, 15 percent. Miscellaneous types of larcenies, not falling into any of the specific categories for which statistics were collected made up 15 percent of the total. The remainder was distributed among pocket-picking, purse-snatching, shop-lifting and thefts from coin-operated machines.

#### Larceny Analysis, 1970

[Percent distribution]

	Area							
Classification.	Total United States	Cities over 250,000	Sub- urban	Rural				
Pocket-picking	1.2	2.5	0.3	0.2				
Purse-snatching	2.6	8.2	.6	.3				
Shoplifting	8.8	8.5	8.4	2,8				
From autos (except accessories)	19.0	21.6	14.2	12, 4				
Auto accessories	20.6	21.9	23.6	15. 5				
Bicycles	14.6	10.6	14.5	3.8				
From buildings	16.3	18.2	14.7	15.0				
From coin-operated machines	1.6	1.2	1.7	1.9				
All others	15. 8	10.3	22.0	48. 1				
Total	100, 0	100.0	100.0	100.0				

#### Clearances

The nature of larceny, a crime of opportunity, sneak thievery, and petty unobserved thefts, makes it an extremely difficult one for law enforcement officers to solve. A lack of witnesses and the tremendous volume of these crimes work in the thief's favor. In 1970, 18 percent of the larceny offenses brought to police attention were solved. Involvement of the young age group is demonstrated by the fact that 40 percent of these crimes

which were cleared in the Nation's cities were solved by arrest of persons under 18 years of age. Juvenile clearance figures for suburban areas and rural areas were 43 percent and 27 percent, respectively.

The larceny clearance percentages were consistent in all population groups ranging from 16 percent in the suburbs to a high of 20 percent in the cities over 250,000 inhabitants and 19 percent in the rural areas. Nationally, the larceny solution rate rose to 18.4 percent from 17.9 percent in 1969.

#### Persons Arrested

Forty-eight percent of the total arrests for serious crimes in 1970 were for larceny. Arrests for this crime were up 13 percent, 1970 over 1969. Volumewise, 51 percent of these arrests were of persons under 18 years of age and when individuals under 21 were considered, the ratio rose to two-thirds. When examined by sex of arrested persons, it was determined that females comprised 28 percent of all arrests for larceny-theft and had a higher involvement in this offense than for any of the Index offenses. In fact, women were arrested more often for larceny than any other offense in 1970.

Arrests of females rose 19 percent in 1970; while arrests of males increased 11 percent. Arrests of whites out-numbered Negroes by 2 to 1 with all other races comprising about 2 percent of the arrests for larceny-theft. The total volume of arrests for larceny-theft in 1970, as compared with the 1960 figures, indicates a 108 percent increase. It is significant to note that arrests of individuals under 18 were 112 percent greater than 1960. The number of adult arrests rose 104 percent over the number of recorded arrests in 1960, for this offense.

#### Persons Charged

As in prior years, law enforcement agencies nationally charged more than twice as many offenders for larceny-theft than for any other serious offense. Seventy-one percent of the adults prosecuted for larceny-theft were found guilty of this offense, 6 percent were found guilty of a lesser charge, and 23 percent had their cases dismissed or were acquitted. Thirty-eight percent of persons processed in 1970 for larceny were referred to juvenile court jurisdiction.

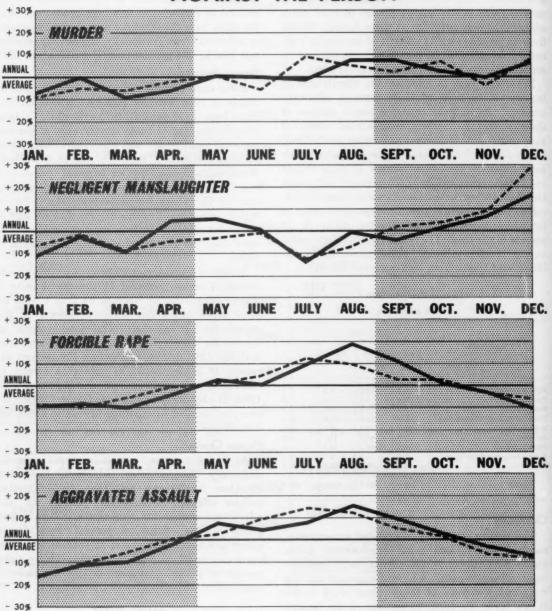

#### **AUTO THEFT**

In Uniform Crime Reporting, auto theft is defined as the unlawful stealing or driving away

## CRIMES

KEY: --- 1965-1969 MOVING AVERAGE

## AGAINST THE PERSON

# BY MONTH

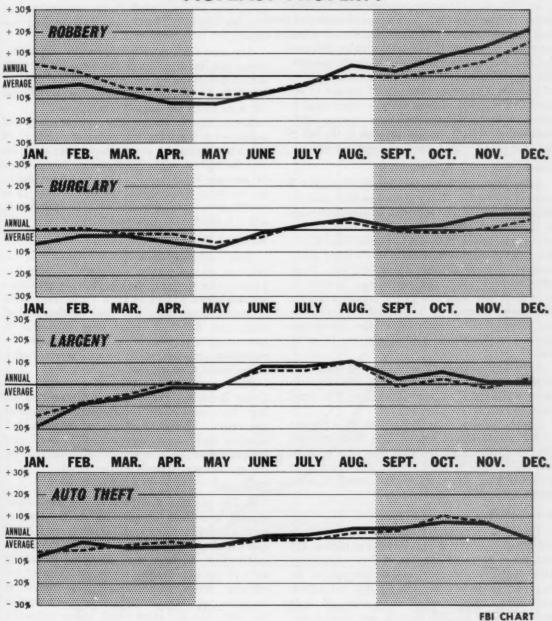

WARIATIONS FROM 1970 ANNUAL AVERAGE

C.

C.

C.

# **AGAINST PROPERTY**

of a motor vehicle, including attempts. This definition excludes taking for temporary use when the vehicle is actually returned by the taker provided prior authority for its use has been granted or can be assumed.

# Volume

In 1970, 921,400 motor vehicles were reported stolen. Geographically, the volume of auto theft was highest in the Northeastern States which reported 30 percent of the total number followed by the North Central States with 26 percent. The Southern and Western States each reported 22 percent. This crime made up 17 percent of the total Crime Index offenses. As was experienced in prior years, seasonal variations during 1970 disclosed auto theft reached its peak in the fall of the year with October, the high month in volume.

# Trend

Auto thefts in 1970 volumewise increased 6 percent over 1969. This offense has been steadily rising each year since 1960, with an overall increase of 183 percent 1960–1970. As it has been pointed out in prior issues, it should be remembered that it is invalid to assume more auto thefts occur solely because of more automobile registrations. From 1960 through 1970, the percentage increase in auto theft has been four times greater than the percentage increase in automobile registrations and four times greater than the percentage increase in the young age population, 15 to 24 years.

Auto theft increased 3 percent in big cities with 250,000 or more inhabitants while the suburban areas registered a 10 percent increase. The rural areas increased four percent.

Geographically, auto thefts were up 9 percent in the Northeastern States. The Southern and Western States each reported rises of 6 percent, and the North Central States 2 percent. The accompanying chart shows the trend in auto thefts, 1960–1970.

# Auto Theft Rate

There was an increase in the auto theft rate from 432 offenses per 100,000 inhabitants in 1969 to 453 offenses in 1970, an increase of 5 percent. Since 1960, the auto theft rate has risen 150 percent. As in 1969, citizens in cities with 500,000 to 1 million population were deprived more often of their motor vehicles in 1970 than in any other population group, with 1,238 per 100,000 inhabitants suffering an auto theft. It should be recalled that

as a part of a prior special study 30 percent of the autos stolen in the District of Columbia were owned by nonresident victims. This ratio will undoubtedly hold true in other large core cities because of the high mobility of the general population.

Nationally, the auto theft rate in large core cities as a group averaged 1,117. In the suburbs the rate was 288, and in the rural areas the auto theft rate was 71.

The auto theft rates by geographic region disclosed the Northeastern States were high in 1970 with 572 followed by the Western States 570, the North Central States 419, and the Southern States 327 auto thefts per 100,000 inhabitants.

Across the Nation in 1970, one of every 100 registered automobiles was stolen or a rate of 10 per 1,000 registered autos. Regionally, this rate was the highest in the Northeastern States where 14 cars per 1,000 registered vehicles were stolen. In the other three regions the figures were 12 in the Western States, 9 in the North Central States, and 7 in the Southern States.

# Nature of Auto Theft

Auto theft rates again clearly indicate that this crime is primarily a big city problem, since the highest rates appear in the most heavily populated sections of the Nation. In 1970, the average value of stolen automobiles was \$948 at the time of theft, and although police were successful in recovering 84 percent of the stolen vehicles, the remaining unrecovered 16 percent represented a dollar loss of \$140 million.

Prior studies conducted under the Uniform Crime Reporting Program have documented the fact that auto theft is primarily a crime of opportunity. The young offender who is most often involved finds the vehicle subject to theft conveniently ready to drive away or in many instances the ignition can be easily compromised.

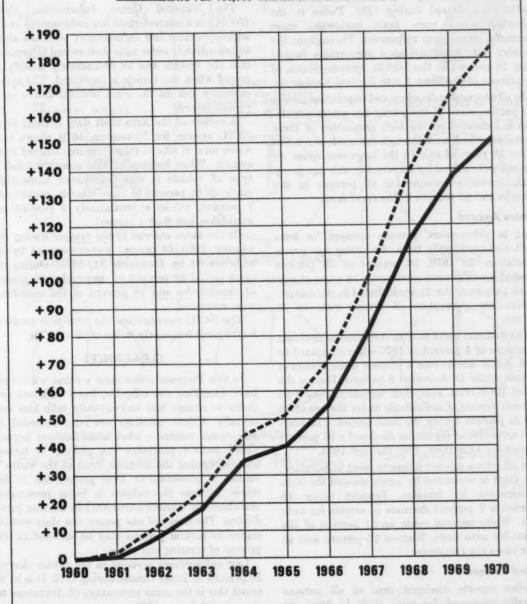

# Clearances

Due to the fact that prior studies have documented two-thirds of all auto thefts occur at night and over one-half are from private residences, apartments, or streets in residential districts, law enforcement agencies were successful in solving only 17 percent of these thefts by arrest of the offender. These crimes occur under cover of darkness and there are seldom any witnesses to the theft. On the other hand, police nationally are successful in recovering about 84 percent of all stolen cars. Over one-half of the stolen vehicles

# AUTO THEFT

1960 - 1970 PERCENT CHANGE OVER 1960

---- NUMBER OF OFFENSES UP 183 PERCENT

a

n

st,

w

of to ly of es are taken and recovered within 48 hours. Although recovery of the vehicle does not clear the offense, the property is available for return to the victim. This high recovery percentage can be attributed to the fact that approximately 75 percent of all cars stolen are used for transportation or the purpose of the theft is unknown. The remainder were taken for resale, stripping for parts, or use in another crime.

In the Nation's largest cities 17 percent of auto thefts were cleared during 1970. Police in the suburban areas were again somewhat more successful clearing up 18 percent. Throughout the country auto theft clearance percentages ranged from 14 percent in the Middle Atlantic States to 21 percent in the West North Central States.

In all geographic divisions and population groups the participation of the young age group population is indicated by the high proportion of these clearances which were through the arrest of persons under 18 years of age. In the large core cities, 42 percent were solved by an arrest in this age group while juveniles account for 40 percent in the suburbs and 33 percent in the rural areas.

# Persons Arrested

As in prior years, persons arrested for auto theft come primarily from the young age group population. In 1970, 56 percent of all persons arrested for this crime were under 18 years of age. When persons under 21 are included in the computations, the proportion of arrests rises to 75 percent.

The national trend in auto theft arrests disclosed a decrease of 4 percent in 1970 when compared to 1969. Adult arrests rose 3 percent while arrests of persons under 18 decreased 8 percent. During the period 1960–1970, auto theft arrests increased 68 percent. Arrests of individuals under the age of 18 rose 51 percent during the same period. The long-term arrest trend for adults disclosed a 94 percent increase for auto theft, 1960 through 1970.

Of all crimes against property, next to burglary, auto theft as measured by arrest showed the least participation by females. Females under 18 recorded a 7 percent decrease in arrests for auto theft. White persons made up 61 percent of the arrests for auto theft, Negroes 36 percent and all other races the remainder.

# Persons Charged

Police reports disclosed that of all persons formally processed for auto theft in 1970, 63

percent were referred to juvenile court jurisdiction. No other Crime Index offense results in such a high percentage of juvenile referrals. When the remaining adult offenders were considered as a group, 50 percent of those prosecuted on charges of auto theft were found guilty as charged, 12 percent were convicted of lesser charges, and 38 percent were acquitted or their cases were dismissed.

# NCIC Stolen Vehicle File

The National Crime Information Center (NCIC) is a computerized law enforcement system which provides law enforcement with the ability to immediately enter auto theft record information into the system and to immediately modify the record when the vehicle is recovered. The system currently has on file some 660,000 active stolen vehicle records.

A review of the auto theft data entered in the NCIC system for November, 1970, shows there was a total of 62,756 vehicle records entered in the system. When looking at this monthly total by type of vehicle it was determined automobiles made up 91 percent of these records, motorcycles 7 percent, trucks approximately 2 percent and mini-bikes less than 1 percent.

Of the autos entered in the system during November, 1970, 69 percent were recovered by law enforcement by December 31, 1970. During the same period 87 percent of the trucks, 30 percent of motorcycles and 28 percent of the mini-bikes were recovered.

The NCIC records show the 1964-year model to be the most frequently stolen of all vehicles.

# **CLEARANCES**

In this Program police clear a crime when they have identified the offender, have sufficient evidence to charge him and actually take him into custody. Crime solutions are also recorded in exceptional instances when some element beyond police control precludes the placing of formal charges against the offender, such as the victim's refusal to prosecute or local prosecution is declined because the subject is being prosecuted elsewhere for a crime committed in another jurisdiction. The arrest of one person can clear several crimes or several persons may be arrested in the process of clearing one crime.

Law enforcement agencies in the nation cleared 20 percent of Index Crimes during 1970. It is to be noted this is the same percentage of clearances as experienced during 1969. 0

19 pe

fo

de

The murder clearance rate increased 0.5 percent, forcible rape increased 0.9 percent, robbery increased 8.2 percent, burglary increased 2.6 percent, larceny \$50 and over increased 2.6 percent and auto theft decreased 5.6 percent. The highest overall Crime Index clearance rate regionally was recorded by the Southern States with 22 percent, the North Central States 21 percent, the Western States 18 percent and the Northeastern States with 17 percent.

Reports submitted by law enforcement agencies in 1970 disclosed police were successful in solving 86 percent of the murder offenses, 56 percent of forcible rapes, 65 percent of aggravated assaults and 29 percent of the robberies. Solutions in the property crime categories showed police cleared 19 percent of the burglaries, 18 percent of the larcenies and 17 percent of the auto thefts. Police are able to clear a higher percentage of the crimes against the person, not only because of the more intense investigative effort afforded these violent offenses, but also due to the smaller volume of these crimes requiring police attention and, more importantly, because witnesses are usually available who can identify the perpetrators.

The accompanying chart reveals the crime and police clearance experience in the 1960's. From 1960 to 1970 the Crime Index offenses rose 176 percent. Police response to this sharp upward trend was an 87 percent increase in the number of arrests for Crime Index type offenses. However, the clearance rate, which relates the number of known offenses cleared, has declined. In 1960, the ratio of Crime Index offenses cleared to crimes reported was 31 out of 100. In 1970, for each 100 Crime Index offenses 20 were cleared.

There are a number of factors influencing the overall police solution rate. These include court decisions which have resulted in restrictions on police investigative and enforcement practices; increases of police workloads in criminal and noncriminal matters, riots, disturbances, marches, etc. The almost constant rate of police strength is not commensurate with the sharp increase in crime and the increasing mobility of those who commit crimes. Clearance tables are provided commencing on page 108.

# Offenses Cleared by Arrests of Juveniles

It has been noted in several prior sections of this publication that persons under 18 years of age are becoming increasingly involved with police through commission of serious crimes. Persons 10 to 17 years of age make up approximately 16 percent of

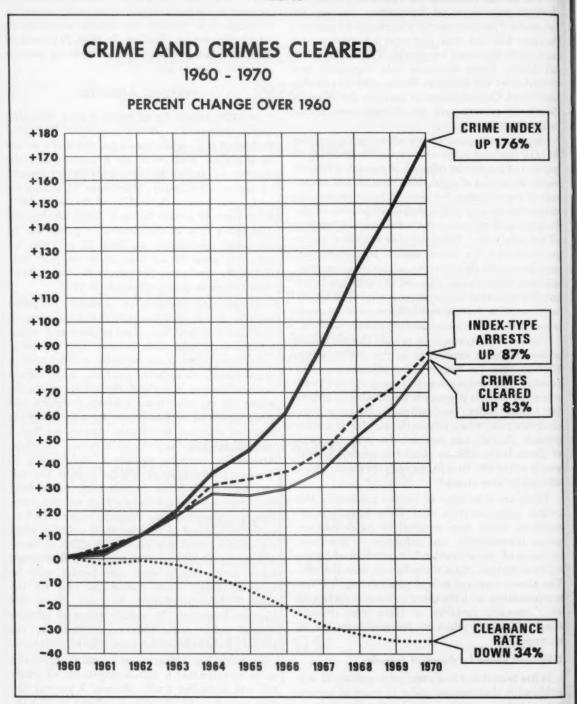

the total United States population. One means of measuring the involvement of the young age group in crime is to identify the number of crimes in which they are the offenders. In 1970, 29 percent of all Crime Index offenses solved involved persons under 18 years of age.

# PERSONS ARRESTED

In 1970, arrests for all criminal acts, excluding traffic, increased 5 percent over 1969. The total volume of city arrests rose 4 percent while arrests in suburban areas were up 8 percent and the number of arrests in the rural areas increased 16 percent. Nationally, there were 43 arrests for each 1,000 persons in the United States. In 1969, there were 40 arrests for each 1,000 inhabitants. The arrest rate for big cities as a group was 58 per 1,000 inhabitants, up from 55 in 1969, for suburban areas 29, up from 28 in the prior year and in the rural areas the arrest rate rose to 20 up from 18 arrests per 1,000 people in 1969.

Arrests are primarily a measure of police activity. Arrest practices, policies and enforcement emphasis will vary from place to place and within a community from time to time. The volume of police arrests for certain unlawful conduct such as drunkenness, disorderly conduct, and certain local ordinances is particularly influenced by the above. On the other hand, robbery, burglary, and other arrests for serious crimes are more likely the result of standard procedures. Arrests are first a measure of police activity as it relates to crime. Arrests do, however, provide a useful index to measure involvement in criminal acts by the age, sex, and race of the perpetrators, particularly for those crimes which have a high solution rate. Procedures used in this Program require that an arrest be counted on each separate occasion when a person is taken into custody, notified or cited. Arrests do not measure the number of individuals taken into custody since one person may be arrested several times during the year for the same or different offenses. As noted above, this happens frequently for certain types of offenses against public order such as drunkenness, vagrancy, disorderly conduct and related violations.

In 1970, law enforcement agencies nationally made an estimated 8 million arrests for all criminal acts, excluding traffic offenses. A percent distribution of arrests by type of offense in 1970 indicates that approximately 8 percent were for crimes against the person, property crime arrests

FBI CHART

m

p

in It

h

10

h

di

made up 22 percent of the total, crimes against morals 10 percent, crimes against public order and decency 48 percent and all other offenses (except traffic) 12 percent.

# Arrest Trends

In 1970, police arrests of adults increased 6 percent, while arrests for juveniles had an overall increase of 4 percent. For the period 1960-1970, police arrests for all criminal acts, except traffic offenses, increased 31 percent. During this same period, arrests of persons under 18 years of age more than doubled while the number of persons in this young age group, 10 to 17 rose 29 percent. It is apparent, therefore, the involvement of young persons as measured by police arrests is escalating at a pace almost four times their percentage increase in the national population. As it has been pointed out in prior issues, a relatively small percentage of the total young age population become involved in criminal acts, about 5 out of 100. Adult arrests, 1960-1970, rose 17 percent in volume. As in the 1960's, decreases in police arrests have occurred in the high volume offenses such as drunkenness, vagrancy, gambling, and sex offenses other than forcible rape and prostitution.

When only the serious crimes are used in computing the long term trend 1960-1970, total arrests increased 86 percent. Adult arrests rose 79 percent, while arrests of juveniles for serious crimes rose 95 percent. Arrests of adults for violent crimes were up 67 percent and for property crimes 86 percent. Juvenile arrests for violent crimes increased 167 percent, 1960-1970, while arrests of persons under 18 for the property crimes rose 89 percent.

### Narcotic Drug Laws

### [Percent]

Region	Heroin or cocaine	Mari- juana	Synthetic narcotics	Other
Northeastern States	59. 6	29, 2	3.0	8.2
North Central States	18.4	54.6	5.0	22. 0
Bouthern States	22.4	80.2	7.0	20, 4
Western States	10.6	56.6	7.6	25. 2
Total	31.3	45.4	5.5	17. 9

### Age

Nationally, persons under 15 years of age made up 9 percent of the total police arrests; under 18, 25 percent; under 21, 39 percent; and under 25, 52 percent. In the suburban areas, the involvement of the young age groups in police arrests is again markedly higher than the national figures with the under 15 age group represented in 13 percent; under 18, 35 percent; under 21, 50 percent; and under 25, 63 percent. In the rural areas the distributions were lower for the younger age groups, with the under 15 group being involved in 5 percent; under 18 in 20 percent; under 21 in 37 percent; and those under 25, 52 percent of total police arrests. When only the serious crimes are considered 20 percent of all arrests in 1970 were for persons under the age of 15 and almost one-half were under 18 years of age.

In reviewing arrest figures, it is important to keep in mind that police arrest practices and emphasis vary which will account for some variations in these statistics from year to year. It is noted arrests of persons under 18 for Narcotic Drug Law violations have increased sharply in recent years. In fact, in 1970, 53 percent of the individuals arrested for violations of the Narcotic Drug Laws were persons under 21 years of age. Twenty-six percent of the marijuana arrests in 1970 were persons under the age of 18 and 62 percent of the arrests for this offense involved persons under 21 years of age. It should be noted that in 1964 less than one-fourth or 23 percent of the persons arrested for Narcotic Drug Law violations were under 21 years of age.

Arrests for Narcotic Drug Law violations 1970 over 1969 were up 44 percent nationally. From 1960 to 1970, arrests for this violation increased 741 percent. There is set forth a tabulation by geographic region showing the type of narcotic drug involved in the arrest of the offender in 1970.

### Car

Male arrests outnumbered female arrests 6 to 1 in 1970. Male arrests in 1970 rose by 4 percent, while female arrests were up 11 percent. Females were arrested in 17 percent of the serious or Crime Index type offenses. Ten percent of the arrests for violent crimes in 1970 involved females and arrests of females for these types of crimes increased 7 percent, 1970 over 1969. Again, as in prior years their involvement was primarily for larceny, which accounted for one out of every five female arrests. In fact, 19 percent of all property crime arrests in 1970 were of females. Females accounted for 24 percent of the forgery, 27 percent of the fraud, 25 percent of the embezzlement, and 16 percent of the narcotics arrests. Over one-half

of the runaway—police custody cases—were girls under 18 years of age.

Long-term arrest trends, 1960–1970, revealed that arrests for young females under 18 years of age increased 204 percent, while arrests for young males under 18 rose 98 percent. It is noted that arrests for young females under 18 for each Crime Index offense more than doubled, 1960–1970. When the serious crimes, as a group, are considered, arrests of males 1960–1970, were up 73 percent and female arrests increased 202 percent.

# Traffic

Supplemental data submitted by agencies over 2,500 in population relating to traffic enforcement disclosed that nationwide, 55 percent of the citations and summonses issued and arrests made in traffic matters were for parking violations. Hazardous traffic violations accounted for 34 percent, and other regulatory violations 11 percent. In the Southern States 44 percent of the traffic arrests were for hazardous violations, in the Western States 43 percent of the arrests were for this type of infraction, in the North Central States 29 percent, and in the Northeastern States 13 percent.

# Arrest Rates

The following table sets forth arrest rates by geographic regions for Crime Index type offenses. Arrest rates indicate law enforcement activity in response to crime rates.

Arrests by Region, 1970

[Rate per 100,000 inhabitants]

Offense	North- eastern States	North Central States	Southern States	Western States
Murder	5.9	8.7	12.1	7. (
Forcible rape	7.8	10.3	11.3	12.0
Robbery	60.3	55.3	51.0	67. 2
Aggravated assault	72.2	58.0	112.6	97. 1
Burglary	143.0	167. 8	202. 2	267.
Larceny	246.1	465. 6	451. 5	498.
Auto theft	64. 7	78.1	78.0	136.
Total	600. 0	. 843.7	913. 8	1061.

# PERSONS CHARGED

Disposition data reveals the results of cases in which law enforcement agencies have made an arrest and subsequently formally charged the offender in a court of jurisdiction. This information is important to the law enforcement admini-

strator in evaluating the quality of investigations and court presentation functions.

In 1970, 80 percent of the adults arrested for Crime Index type offenses were prosecuted in the courts. Of the adults prosecuted for Crime Index offenses 61 percent were found guilty as charged, and 10 percent of a lesser charge.

It must be recognized that not all arrested persons are turned over to the courts for prosecution. There are various reasons for this: failure of the victim to cooperate or appear for the prosecution, persons arrested are released with a warning, evidence is obtained which discloses the arrested person did not commit the offense or there is not sufficient evidence obtainable to support either a formal charge or a subsequent prosecution. For example, about one-half of the juveniles arrested are handled by the individual law enforcement agencies without preferring a formal charge or referring them to juvenile authorities. All contributors to this Program are urged to obtain and report final disposition in cases involving persons they arrest. Tables containing this data commence on page 114. Keep in mind that police methods of handling juvenile offenders differ widely. Also, the tables concerning juveniles (local age limit) refer to those who were arrested and turned over to juvenile authorities in connection with specific criminal acts.

In 1970, 41 percent of the murder defendants were either acquitted or their cases dismissed at some prosecutive stage. Forty-six percent of those charged with forcible rape were acquitted or had their cases dismissed, and 39 percent of the persons charged with aggravated assault won their freedom through acquittal or dismissal.

Of the adults who were prosecuted for Crime Index offenses, 29 percent were acquitted or their cases were dismissed. Larceny, 71 percent, recorded the highest percentage for persons found guilty on the original charge in 1970. This was followed by 53 percent on the original charge for burglary, 50 percent for auto theft, 47 percent for robbery, 44 percent for aggravated assault, 44 percent for murder and 36 percent for forcible rape. The offense which had the highest percentage of a lesser charge was forcible rape where 18 percent of the defendants were convicted on some charge other than forcible rape.

Forty-three percent of the persons processed for the Crime Index categories were young persons referred to juvenile court jurisdiction. Again, as in 1969, juvenile referrals were highest for auto theft with 63 percent of those processed for this offense, 57 percent burglary, 38 percent larceny, 41 percent robbery, 22 percent forcible rape, 18 percent aggravated assault and 12 percent murder.

During 1970, as in past years, arson, auto theft, burglary and vandalism recorded high percentages of juvenile referrals. When all crime categories are reviewed, it is noted that convictions on original charges remained high in the offenses against public order and decency—driving under the influence, drunkenness, disorderly conduct and vagrancy. As in prior years offenses against trust such as fraud and embezzlement also recorded a high percentage of conviction on original charges.

# CAREERS IN CRIME

From 1963 through 1969 the Uniform Crime Reporting Program processed data on some 240,000 offenders for statistical use. This study has been used to document the extent to which criminal recidivism over a period of time contributes to annual crime counts and has also been used to show the need for the centralization of law enforcement information at the state and national level in view of criminal repeating and mobility. This study was made possible by the cooperative exchange of criminal fingerprint data among local, state and federal law enforcement agencies. While the basis of selection in this study was a federal offense, it should be kept in mind that most federal criminal violations are also violations of local and state laws. The offender records examined in this study are, therefore, felt to be comparable to the local and state experience for the more serious violators.

The Careers in Crime study brought to the Uniform Crime Reporting Program valuable statistical experience in the field of criminal histories, and has demonstrated the potential use of criminal history information to measure the success or failure of the entire criminal justice system. The key to the effectiveness of the system is in knowing what happened to the people who were handled or treated by the criminal justice process, specifically, whether they were deterred from further criminal acts and/or rehabilitated.

Beginning in January 1970, the FBI commenced converting Federal offender records to computer form for an operational criminal history file within the National Crime Information Center (NCIC). The record formats and data elements for criminal history, although designed

for operational use, were established with full recognition of the value of criminal history for statistical and research purposes.

# Profile

A summary of 37,884 offenders arrested on federal charges in 1970 is set forth in table A. Of these offenders, 25,909 or 68 percent had previously been arrested on a criminal charge.

These 37,884 offenders had an average criminal career of 5 years and 5 months (span of years from first to last arrest). During this time they were arrested on criminal charges an average of four times each for a total of 158,000 charges. These offenders had a total of 52,936 convictions and 22,240 imprisonments of 6 months or more during their crime careers prior to their arrest in 1970.

The extent to which these offenders had a prior arrest for any offense is set forth in the following table. Likewise, percent convicted for a prior crime is set forth.

Keep in mind that this presentation is conservative and understates the amount of crime committed by these offenders since it is based on police detection, arrest and submission of a fingerprint card. As indicated in earlier pages of this publication law enforcement agencies do not clear or solve most crimes. It is also true that the prior conviction and imprisonment rates are slightly lower than actual because police agencies do not always submit such data after arrest, conviction and release.

A profile of criminal repeating for selected offenders is shown in the following table. Average age for the first arrest is high because of the general practice not to submit criminal finger-print cards on juveniles. Criminal career is the average years between the first and last arrest.

The offender profile is classified by type of crime for which arrested in 1970.

A study of the 25,909 repeat offenders indicate that 45 percent were rearrested in the same state during their criminal careers and 55 percent were rearrested at least one time in states other than that of the original arrest. Twelve percent of the repeat offenders were arrested in three different states during their criminal career and 10 percent were rearrested in more than three different states.

# 4 Year Follow-up

A part of the Careers in Crime Program was the follow-up on offenders after their release from the

# Table A-Profile of Offenders Arrested During 1970

[By last charge in 1970]

federal criminal justice system. The records of offenders released during 1965 were followed for new arrests through 1969. Charts and tables are presented in this section on the rearrest experience by offense; type of release; and age, sex and race of the offender.

Keep in mind that this Program for completeness depends on the criminal fingerprint identification function. The arrest fingerprint card establishes the charge and, usually on minor charges, the actual disposition. Otherwise, to obtain disposition

data at prosecutive or court level the system relies on the submission of a second form. Further, for correctional release, another form or fingerprint card must be submitted. For the follow-up study only those records can be used that are complete and actually show a release in a given year (1963, 1965) back to the community. If the disposition or correctional release information is not received routinely for a specific charge it does not become known on a subsequent rearrest.

Of the 16,332 offenders released to the

FBI CHART

community in 1965, 63 percent had been rearrested by the end of the fourth calendar year after release. Of those persons who were acquitted or had their cases dismissed in 1965, 85 percent were rearrested for new offenses. Of those released on probation 56 percent repeated, parole 61 percent, and mandatory release after serving prison time 75 percent. Offenders receiving a sentence of fine and probation in 1965 had the lowest repeating proportion with 37 percent rearrest. This type of sentence is generally found in connection with violations such as income tax, fraud and embezzlement.

When criminal repeating is viewed by type of crime for which arrested, convicted, or released in 1965, rearrests ranged from 16 percent for the income tax violators to 80 percent of the auto thieves. The predatory crime offenders had high repeat rates with 76 percent of the burglars being rearrested within 4 years, 68 percent of assault offenders, and 57 percent of the robbers released in 1965. Likewise, 69 percent of the narcotic offenders who are frequently users were rearrested after release. The fact that 67 percent of the

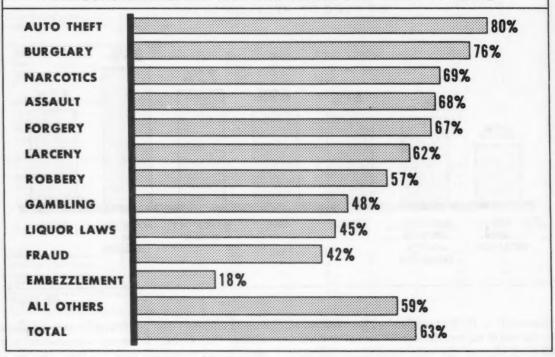

forgery offenders were rearrested for new violations within the 4-year follow-up, documents law enforcement experience with this type offender.

The younger the age group, the higher the repeating rate has been documented many times, as it is here. Nevertheless, this fact calls for greater rehabilitation efforts directed at the young offender, if hardened criminal careers are to be aborted. Of the offenders under 20 released in 1965, 74 percent were rearrested by the end of 1969, 71 percent of those 20 to 24 years of age, and 65 percent of the offenders 25 to 29 years. When viewed by race the Negro rearrest rate, 68 percent, was higher than the white offender rate of 60 percent. All other races, made up primarily of Indian Americans, had a rearrest rate of 65 percent between release in 1965 and 1969. Of the 1,290 female offenders released in 1965, 41 percent had been rearrested for new offenses by 1969.

Table B sets forth the cumulative percentage of rearrest by age group and by year after release. By the end of the second calendar year (1967), after release during 1965, 53 percent of the of-

fenders had been rearrested. This pattern supports prior studies of this kind and is consistent for all age groups. Of all offenders rearrested during this 4-year follow-up, over one-half were under 30 years of age and the majority of these rearrests occurred within 2 years after release. There is set forth in table B the rearrest experience of federal offenders released to the community in 1965 and

for comparison purposes the experience of a generally different group released in 1963. The latter experience has been previously published in prior issues of Uniform Crime Reports. The repeat rate for both groups over the similar periods of follow-up (4 years) is about the same. This is true not only for each age group as shown here but also by type of offense and type of release.

# POLICE EMPLOYEE DATA

This publication has a section on Law Enforcement Employee Data which contains tables showing average police employee strength by geographic divisions and population group, percentages of civilian employees, and an individual listing of police employees for reporting cities and surrounding suburban counties. Tables are published containing data relative to law enforcement officers killed and assaulted in the line of duty to supplement the narrative material which follows.

# Employee Rates

The average number of police employees per 1,000 inhabitants in 1970 (including civilian employees) was 2.3 which is a 5 percent increase over the 1969 rate of 2.2.

Most United States cities continue to operate with a police employee ratio of less than the national average of 2.3 per 1,000. When arrayed by quartile, 50 percent of all American cities have police employee ratios ranging from 1.2 to 1.9 police employees per 1,000 inhabitants.

Nationally, large cities with 250,000 or more inhabitants as a group, had an average ratio of 3.3 employees per 1,000 inhabitants, an increase of 6 percent over the 1969 figure of 3.1.

The ratio of police employees to population in the suburban areas was 1.7, the same as the ratio in 1969. Again it should be noted those communities which are experiencing rapidly growing and increasing densities of population are also recording the largest percentage increases in the volume of crime. One-half of the suburban police departments have from 1.0 to 1.8 employees per 1,000 inhabitants. The average rate of full-time employees in sheriffs' departments was 1.3 per 1,000

inhabitants, however, in three-fourths of these departments the rate was 1.0 or fewer employees.

Police departments in the Middle Atlantic States continued to have the highest rate, 3.0 employees per 1,000 inhabitants. Cities in the West South Central States had the lowest ratio of 1.8.

# Civilian Employees

In Table 52 the percentage of total law enforcement personnel represented by civilian employees is tabulated by population group. On the average, during 1970, 13.2 percent of all city police personnel were civilian employees, up from 12.5 percent in 1969. Law enforcement administrators are continuing to utilize greater numbers of civilian employees, thereby relieving sworn personnel for active police duties.

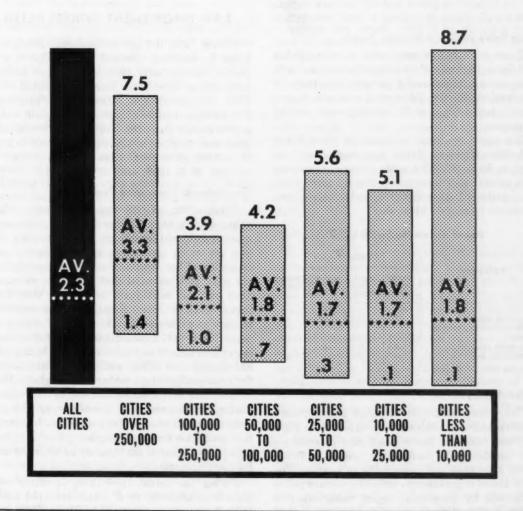

# Sworn Personnel

Computing law enforcement employee rates on the basis of sworn personnel only (excluding civilian employees) determines that the average rate for all cities was 2.0 in 1970 compared to the 1969 rate of 1.9 per 1,000 inhabitants. The city rates, nationally, range from 0.1 to 7.5 per 1,000 inhabitants. The average ratio of sworn employees in sheriffs' departments was 1.1, the same as in 1969 and the rate range for the 1,252 reporting county agencies was 0.1 to 9.9 per 1,000 inhabitants. Caution should be exercised, however, in using rates for comparative purposes since there is a wide variation in the responsibilities of various law enforcement agencies throughout the country. Just as the conditions which affect the amount and type of crime that occurs vary from place to place, so do the requirements for types of police services based upon the conditions which exist in

# POLICE EMPLOYEE DATA

AVERAGE NUMBER OF POLICE DEPARTMENT EMPLOYEES, AND RANGE IN NUMBER OF EMPLOYEES, PER 1,000 INHABITANTS

BY POPULATION GROUPS, DECEMBER 31, 1970

a given community. For example, the increased need for police service in a community which has a highly mobile or seasonal population, differs from a community which has a relatively stable or fixed population. In addition, a small community situated between two large cities may require a greater number of law enforcement personnel to handle crime conditions based solely on its geographic location.

The functions of the sheriffs also vary widely in different sections of the country. In certain areas the sheriffs' responsibilities are limited almost exclusively to civil functions and/or the administration of the county jail facilities. The sheriffs' departments used in computing rates, however, are all engaged in police activity and are responsible for all phases of policing in their jurisdiction.

# State Police and State Highway Patrols

There were 54,754 employees in State Police and State Highway Patrol organizations in 1970. This was an increase of 4 percent over 1969. Of the total employees, 74 percent were sworn personnel, and 14,284, or 26 percent, were civilian employees.

The police employee strengths of State Police and State Highway Patrol organizations are set forth in Table 56. This table provides additional data relative to the miles of primary highway and the number of state motor vehicle registrations per sworn employee, by state.

# Annual Average Number Per Officer

		Geograpi	hic region	
Police activity	North- eastern States	North Central States	Southern States	Western States
Crime Index offenses	11.3	12.6	13. 2	22. 1
arrests	2.8	5.9	12.9	14. 6
Other arrests (criminal)	8.3	14.3	18.2	22, 4
Traffic charges issued	99	95	128	220

# Police Activity

The volume and type of police activity, both criminal and noncriminal, vary widely from place to place. Likewise, police policy and practice are not standardized, resulting in widely differing arrest rates from one community to another. The table above is provided to show the relative police workloads by geographic region using reported Crime Index offenses, criminal arrests made, and traffic charges issued per sworn police officer.

The variations in officer workload result from many factors. It assumes that all sworn officers in all regions are assigned to such duties. This is not the case. Many police officers are fully engaged in administrative functions, special assignments and other non-line duties.

It is pointed out the figures set forth in the detailed police employee tables (Tables 50 and 51) represent national averages. They should be used as a guide or indicator and not considered as recommended or desirable police strengths. Adequate manpower for a specific place can only be determined after a careful study and analysis of the various factors which contribute to the need for police service in that community.

# LAW ENFORCEMENT OFFICERS KILLED

During 1970, 100 law enforcement officers were killed by felonious criminal action. This is a 16 percent increase over 1969, when 86 law enforcement officers were slain. During the period 1961-1970 (10 years) 633 officers were murdered. The average number of police officers slain was 59 a year during the period 1961-1969. Specifically, there were 37 killed in 1961; 48 in 1962; 55 in 1963; 57 in 1964; 53 in 1965; 57 in 1966; 76 in 1967; 64 in 1968; 86 in 1969; and 100 in 1970.

# Circumstances Surrounding Deaths

Examination of circumstances under which police officers were murdered in 1970, discloses a most urgent need for officers to be more alert than ever before in connection with all their duties, regardless of how routine these duties have been in the past. It is essential that officers be extremely alert with all individuals with whom they come into contact. No arrest situation can be considered routine as evidenced by the fact that during the period 1961-1970 more officers were killed attempting arrests than in any other manner. During 1970, 37 officers were killed while attempting arrests for crimes other than robbery or burglary. Nineteen officers were slain by felons they encountered during the commission of a robbery, or who they were in pursuit of as robbery suspects. In connection with the crime of burglary, 5 officers were killed at the scene of the burglary or while pursuing burglary suspects.

During the period 1966-1970, 29 officers were slain from ambush, 19 of which occurred during 1970, 3 occurred in 1969, and 7 in 1968. There were no ambush slayings in 1966 or 1967. In 1970, 4

# Law Enforcement Officers Killed, 1961–1970 (By Type of Weapons Used)

Type of weapon used	Total	Percent distribu- tion 1	1961-1965	Percent distribu- tion 1	1966-1970	Percent distribu- tion 1
Handgun	406	78.6	185	74.0	281	78.4
Shotgun	78	12.3	35	14.0	43	11.2
Rifle	60	9.8	21	8.4	30	10. 2

Knife	6	.9	1	.4	5	1.3
Bombs	2	.3			2	
Personal weapons (hands, fists, feet, etc.)	8	1.3	3	1.2	5	1.1
Other (clubs, etc.)	18	2.1	5	2.0	8	2.1
Total	633	100.0	250	100.0	383	100.

<sup>1</sup> Because of rounding, percentages may not add to total.

officers were slain by mentally deranged persons. During the period 1961-1970 a total of 25 officers were murdered by mentally deranged persons, 20 of which occurred during the period 1966-1970.

Seven officers were murdered while investigating suspicious persons or circumstances in 1970, and 6 met death in responding to "disturbance calls" involving such things as family quarrels, man with gun, etc. Three officers were slain while they were transporting or otherwise engaged in custody of prisoners.

During 1970, 35 officers were slain in the North Central States, 24 in the Southern States 22 in the Western States and 19 in the Northeastern States. The following chart shows the number of law enforcement officers killed by region for each of the two 5-year periods, 1961–1965 and 1966–1970.

# Weapons Used

Ninety-three of the police murders in 1970 were perpetrated through use of firearms. Of these deaths, 73 were caused through the use of handguns, 12 with shotguns, and rifles were used to kill 8 of the officers. Five officers were killed when their own guns were used against them by their assailants. The premeditated slaying of 2 officers, in two separate incidents, occurred through the use of bombs. Three policemen met death as a result of being assaulted with knives, while 1 officer was killed through the use of personal weapons when he was beaten with hands, fists, feet, etc. by two men. One officer was feloniously killed through the use of an automobile, when he was run down by an offender who was wanted for robbery and auto theft.

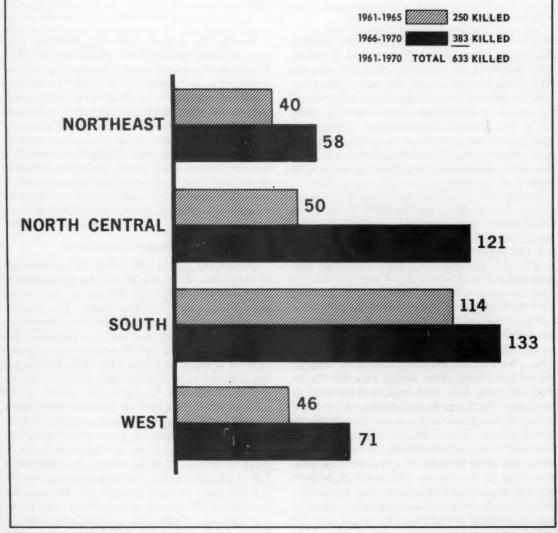

During the period 1961-1970, firearms were used by felons to commit 95 percent of the police killings. Seventy-four percent of the weapons used were handguns. Specifically, of the 633 law enforcement officers slain by criminal action during this period, 466 were killed through use of handguns, 78 with shotguns, 60 with rifles, 6 with knives, 2 with bombs, 8 with personal weapons such as hands, fists, and feet, and 13 by other means such as clubs, automobiles, etc. A total of 80 officers or 13 percent were nurdered with their own handguns. The preceding table shows the type of weapons used to kill officers from 1961 through 1970.

# Profile of Victim Officers

During the period 1961-1965, the median age of the victim officer was 32 and the most common age was 28. Ninety-four percent of the officers were white and 5 percent Negro. The median years of service were 5 and 10 percent of the officers had 1 year or less service. Forty-six percent had 5 years or less service and 32 percent had 10 years or more. During the period 1966-1970, the median age dropped to 30 and the most common age for victim officers was 24. Eighty-six percent of the victims were white and 13 percent were Negro. The median years of service remained at 5. Fifteen percent of the victims had I year or less of service, 47 percent 5 years or less, and 28 percent over 10 years of service. For the entire 10-year period, 1961-1970, the victim officers' median age was 31 and the most common age was 25. For this 10year period, 89 percent of the officers were white and 10 percent Negro. The median years of service for the entire period was 5. Thirteen percent had

1 year or less of service, 47 percent had 5 years or less, and 29 percent had over 10 years of service. The preceding table sets forth additional information concerning the victim officers.

# Types of Assignment

Officers who are assigned patrol duties within law enforcement organizations have the most hazardous type of assignment. During the course of his duties the patrol officer is frequently in contact with suspicious persons who are in automobiles or on foot. Each of these situations constitutes a threat to the officer's personal safety. The patrol officer is readily identifiable because of his uniform and/or patrol vehicle. The patrol officer cannot hide his presence or official capacity. The patrol officer frequently must determine quickly and accurately if a person, or persons, is involved in a criminal act, and if the person, or persons, constitutes a danger to his personal safety. The patrol officer does not have the benefit of 20/20 hindsight, which other people not immediately involved, constantly utilize. The patrol officer also risks his life through frequent encounters with criminal offenders at, or near, crime scenes. These perils are in a large measure substantiated by the fact that officers assigned to patrol duty are the most frequent targets of the police killer. Officers assigned in other capacities are confronted with equally tense and dangerous types of situations while performing their duties, but not with the same frequency.

During 1970, 64 patrol officers were slain. Sixty of these officers were assigned to patrol cars while four were foot patrolmen. Twenty-four officers were detectives or officers on special assignments. During 1970, in the highest tradition of the law enforcement profession, 12 officers while in an off-duty status were taking appropriate police action concerning crimes committed in their presence when they were slain. Since 1961, 72 percent or 456 of the 633 officers slain by felons

were assigned to patrol duties. In 1970, 40 of the officers were alone when killed. During the period 1961–1970, 35 percent or 224 of the officers were alone when they sacrificed their lives for the community they were sworn to protect. Information is set forth in the following table concerning types of assignment and circumstances involved in connection with the murders of officers during the periods of 1961–1965 and 1966–1970.

# Time of Murder

The months of January and June proved to be the most dangerous for law enforcement officers during 1970. During each of these months 15 officers were feloniously murdered.

In 1970, more officers were slain on Friday than on any other day of the week. This is in contrast to 1969, when more officers were killed on Sunday. During the period 1961-1970, Friday proved to be the most dangerous day. One hundred eight officers were killed on Friday, 96 Saturday, 92 Monday, 89 Thursday, 88 Sunday, 83 Wednesday, and 77 on Tuesday. During the period 1966-1970, Monday was the most dangerous day with 63 officers slain followed by Friday with 58, Saturday 56, Sunday 55, Thursday 54, Tuesday 51, and Wednesday 46. During the period 1961-1965, Friday was the most dangerous day with 50 officers being killed, followed by Saturday with 40, Wednesday 37, Thursday 35, Sunday 33, Monday 29, and Tuesday 26. During the 10-year period, 1961-1970, 70 percent of all killings of law enforcement officers occurred between 4:00 p.m. and 4:00 a.m. The most dangerous times were between 11:00 p.m. and midnight when 53 officers were killed and from 1:00 a.m. until 2:00 a.m. when 54 officers were murdered. Chart 25 shows the distribution of police murders by hour of day in all instances when known.

### Criminal Offenders

Law enforcement cleared 91 of the 100 police murders that occurred in calendar year 1970. In clearing these crimes, law enforcement arrested 133 persons. Thirty-nine percent of the offenders were white and 61 percent Negro.

During the period 1961-1970, 633 officers were slain; 849 offenders were arrested, clearing 96 percent of these killings. Seventy-one percent of the offenders had prior arrest for criminal charges. Fifty-seven percent of the offenders had been convicted of prior criminal charges and 38 percent had prior arrests for violent types of crime such as murder, rape, armed robbery,

BY HOUR OF DAY

1961 - 1970

# CRIMINAL HISTORY PROFILE OF 849 PERSONS ARRESTED FOR MURDERING LAW ENFORCEMENT OFFICERS

1961 - 1970

aggravated assault, etc. Sixty-seven percent of those who had previously been convicted on criminal charges had been granted leniency in the form of parole or probation. In fact, 23 percent of the offenders were on parole or probation when they were involved with the murder of an officer. Seven percent of the offenders had a prior arrest for a narcotics charge and 3 percent had prior arrests for police assault.

Ninety-six percent were male and 4 percent female. During this period, 56 percent of the offenders were white and 44 percent Negro.

In 1970, 10 offenders were killed at the scene of the crime or soon thereafter by officers and one offender committed suicide. For the period 1961-1970, 92 assailants were killed at the crime site or within a short time after the murder was committed; 18 committed suicide shortly after the killing and four died from other causes.

Between 1961 and 1970 the offenders ranged in age from 13 years to 82. During this period the median age of these offenders was 25 while one-half were between the ages of 20 and 30. Nine percent, or 78 were under the age of 18 and 20 was the most common age of the police killers. In 1970, the median age of the offenders was 25 and one-half of these persons were between the ages of 20 and 30. Six of the persons committing these fatal attacks were under the age of 18. The most common age of the police killer was 20 in 1970.

The following table sets forth additional details regarding the offender.

# Geographic Locations

The 100 law enforcement officers slain during 1970 were from 70 different law enforcement agencies in 27 states. The Chicago, Ill., Police Department had 10 officers murdered and the New York City Police Department had seven officers slain. The State of California had the highest number of officers killed during the year. While safeguarding life and property, 20 law enforcement officers were murdered. The State of Illinois was second with 12 and New York State was third with nine, followed by the States of Michigan and Ohio with seven each.

### Assaults on Officers

One of the increasingly serious problems facing law enforcement today is the growing attitude of disrespect for police and the failure of citizens to come to the aid of the officers being attacked as

Offenders	Total	Percent of all offenders	1961- 1965	Percent	1966- 1970	Per- cent

Most common age of offender: 1961-65, age 25; 1966-70, age 20; 1961-70, age 20.

they attempt to perform their lawful duties. These duties often necessitate confrontations with emotionally aroused citizens protesting real or imagined grievances. These situations have, in a large measure, accounted for the upward trend of assaults on police. There was an increase of 11 percent in the rate of assaults on police in 1970 over 1969. Nationally, there were 18.7 assaults for every 100 officers in 1970 up from 16.9 in 1969 and 15.8 in 1968. Geographically, the highest assault rate occurred in the East North Central States with 27 for every 100 officers, followed by 21 in South Atlantic and Pacific States.

While every assault does not result in personal injury to the police officer, many of them—34 percent in 1969 and 35 percent in 1970—did result in physical harm to the officer and usually in loss of duty time. The national assault-with—injury rate of 6.6 per 100 officers reflects the continuing hazards of the law enforcement profession when compared with the rates of 5.7 in 1969, 6.6 in 1968, and 5.4 in 1967. In 1970, 81 percent of the police assaults were by use of hands, fists, feet, teeth, etc. Where weapons were used in committing these assaults firearms were used in 31 percent, a knife or cutting instrument in 15 percent and blunt objects or other weapons in 54 percent. Table 54 sets out police assault rates

for geographic divisions and population groups for 1970.

# **Accidental Deaths**

Three hundred forty-five law enforcement officers died as a result of accidents occurring in the line of duty for the period of 1961 through 1969. In 1970, an additional 46 officers died, bringing the total number of such deaths from 1961 through 1970 to 391. These officers were not included in the preceding information concerning law enforcement officers who were killed as a result of felonious

criminal action. Automobile accidents have claimed the lives of 204 officers making it the leading cause of accidental deaths in the law enforcement profession. Seventy-nine officers have been killed in accidents involving motorcycles. Forty-two died as a result of accidents while they were directing traffic or while they were at the scene of a previous accident. The other deaths took place when firearms were accidentally discharged, helicopter crashes, falls, etc. Thirteen officers were killed in these types of accidents in 1970.

# Law Enforcement Code of Ethics

As a Law Entercement Officer, my fundamental duty is to serve mankind; to safeguard lives and property; to protect the innocent against deception, the weak against oppression or intimidation, and the peaceful against violence or disorder; and to respect the Constitutional rights of all men to liberty, equality and justice.

I ttill keep my private life unsullied as an example to all; maintain courageous calm in the face of danger, scorn, or ridicule; develop self-restraint; and be constantly mindful of the welfare of others. Honest in thought and deed in both my personal and official life, I will be exemplary in obeying the laws of the land and the regulations of my department. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept ever secret unless revelation is necessary in the performance of my duty.

I will never act officiously or permit personal feelings, prejudices, animosities or friendships to influence my decisions. With no compromise for crime and with relentless prosecution of criminals, I will enforce the law courteously and appropriately without fear or favor, malice or ill will, never employing unnecessary force or violence and never accepting gratuities.

I TPTUDNIZE the badge of my office as a symbol of public faith, and I accept it as a public trust to be held so long as I am true to the ethics of the police service. I will constantly strive to achieve these objectives and ideals, dedicating myself before God to my chosen profession . . . law enforcement.

# INTRODUCTION

# Background

The Uniform Crime Reporting Program is the outgrowth of a need for a national and uniform compilation of law enforcement statistics. This need was expressed by law enforcement executives many years ago. In 1930, crime reports were solicited from law enforcement agencies throughout the Nation based on uniform classifications and procedures developed by the Committee on Uniform Crime Records of the International Association of Chiefs of Police (IACP). In that year the Federal Bureau of Investigation (FBI), on request of the above organization, assumed the role as the national clearinghouse.

The Committee on Uniform Crime Records, IACP, continues to serve in an advisory capacity to the FBI in the operation of this Program. In this connection, the Field Service Division of the IACP is also playing an active and effective part in quality control through surveys of police record and crime reporting systems. Dr. Peter P. Lejins, Professor, Department of Sociology, University of Maryland, continues as a consultant to the FBI in the conduct of this Program.

The National Sheriff's Association (NSA) in June 1966, established a Committee on Uniform Crime Records to serve in an advisory capacity to the NSA membership and the national Uniform Crime Reporting Program. This Committee actively encourages sheriffs throughout the country to fully participate in this important Program.

Committees on Uniform Crime Reporting within state law enforcement associations are active in providing service by promoting interest in the Uniform Crime Reporting Program, fostering more widespread and more intelligent use of uniform crime statistics and by lending assistance to contributors when the need exists.

In the last several years the FBI has been actively assisting individual states in the development of statewide programs of police statistics compatible with the national system. These statistical programs have been given impetus by developing statewide computerized law enforcement information systems, of which they are an

essential part. Through such mandatory state programs more complete and a better quality of reporting is envisioned. Likewise, through coordination with the state agency the data is available for the use of the state, and the collection machinery to the national agency is substantially streamlined.

In 1969 the FBI ceased the collection of all data directly from municipalities and counties in New Jersey and Michigan. In California the FBI no longer collects the monthly offenses known reports direct from law enforcement agencies; however, the annual arrest, disposition of persons charged, and law enforcement employee reports continue to be collected direct from the individual law enforcement agencies. During 1969 and 1970 seven additional states began collecting all Uniform Crime Reporting data from individual agencies. These states are Kentucky, Rhode Island, Pennsylvania, Minnesota, Nebraska, Florida, and Wisconsin. At least 12 additional states have enacted necessary legislation to establish State Uniform Crime Reporting Programs. Most of these states are actively working with the FBI in an effort to establish their systems in 1972. The conditions under which these systems are established are as follows:

(1) The state program must conform to the national Uniform Crime Reports standards and information required. This, of course, does not prohibit the state from collecting other statistical data beyond the national collection. (2) The state agency must have a proven effective mandatory statewide program with at least 2 years experience. (3) Coverage within the state by a state agency must at least be equal to that attained by Uniform Crime Reports. (4) The state agency must have adequate field staff assigned to assist local units in record practices and crime reporting procedures. (5) The state agency must furnish to the FBI all of the detailed data regularly collected by the FBI in the form of duplicate returns, computer printouts or magnetic tape. (6) The state must have the proven capability (tested over a period of time) to supply all the statistical data required to the FBI

in time to meet national Uniform Crime Reports publication deadlines. (7) The FBI will continue its internal procedures of verifying and reviewing individual agency reports for both completeness and quality. (8) The FBI will continue to have direct contact with individual reporting units within the state where necessary in connection with crime reporting matters, but will coordinate such contacts with the state agency. (9) Upon request, the FBI will continue its training programs within the state with respect to police records and crime reporting procedures. For mutual benefit these will be coordinated with the state agency. (10) Should circumstances develop whereby the state agency cannot provide the data required by the national program, the FBI will reinstitute a direct collection of Uniform Crime Reports from police units within the state.

# **Objectives**

The fundamental objective of this Program is to produce a reliable fund of nationwide criminal statistics for administrative and operational use of law enforcement agencies and executives. At the same time, meaningful data is provided for other professionals with related interests in the crime problem and for scholars, as well as to inform the public of general crime conditions.

Specifically, the means utilized to attain these goals are: (1) An attempt is made to measure the extent, fluctuation and distribution of serious crime in the United States through the use of a Crime Index consisting of seven selected offenses. This count is based on these seven offenses being reported to the police or coming directly to their attention. (2) The total volume of all types of criminal offenses is compiled as they become known by police arrests. (3) Since the above are also measures of law enforcement activity, related data is collected to demonstrate effectiveness of enforcement activities, available police strength and significant factors involved in crime.

# Reporting Procedure

Under this national voluntary system each contributing law enforcement agency is wholly responsible for compiling its own crime reports for submission to the FBI. Each contributor is supplied with the Uniform Crime Reporting Handbook which outlines in detail procedures for scoring and classifying offenses. The Handbook illustrates and discusses the monthly and annual reporting forms; as well as the numerous tally

sheets made available to facilitate the periodic tabulation of the desired data.

The publication of the Uniform Crime Reporting "Newsletter," which was initiated in October 1963, has continued with issues being published when pertinent. This "Newsletter" is utilized to explain revisions in the Program as well as to present information and instructional material to assist contributors.

Recognizing that a sound records system is necessary if crime reporting is to meet desirable standards, the FBI furnishes a Manual of Police Records to law enforcement agencies upon request. Special Agents of the FBI are widely utilized to encourage new contributors and to assist them by explaining the procedures and definitions necessary under the uniform system.

On a monthly basis, law enforcement agencies (police, sheriffs, and state police) report the number of offenses that became known to them during the month in the following crime categories: Murder and nonnegligent manslaughter, manslaughter by negligence, forcible rape, robbery, assault, burglary, larceny and auto theft. This count is taken from a record of all complaints of crimes received by the law enforcement agency from victims, other sources, and/or discovered by officers. Whenever complaints of crime are determined through investigation to be unfounded or false they are eliminated from this count. The number of "offenses known" in these crime categories is reported to the FBI without regard to whether anyone is arrested for the crime, stolen property recovered, local prosecutive policy, or any other consideration. Law enforcement agencies on a monthly basis report the total number of these reported crimes which they clear either by arrest or by exceptional means. A separate count of crimes cleared which involve only persons under the age of 18 is shown. Law enforcement agencies also report the number of justifiable homicides which occur, the number of law enforcement officers killed, and the value of property stolen and recovered during the month. Total arrests are also reported for all criminal acts, except traffic, separated as to adults and juveniles.

On an annual basis law enforcement agencies provide detailed arrest reports on persons arrested for all criminal offenses, except traffic, with respect to the age, sex, and race of the offenders, as well as a report on the number of persons formally charged and their ultimate disposition. Law enforcement employee data specifically encompasses the number

of sworn and other personnel, and is collected as of December 31 each year. As State Uniform Crime Reporting systems are developed the states are encouraged to have law enforcement agencies report the detailed arrest data by crime category, age, sex, and race on a monthly basis as well as the report concerning the number of persons formally charged and the disposition of such charges. Beginning in January 1972, a monthly collection will be made on law enforcement officers assaulted. Data will be collected concerning the type of weapon used and the circumstances of the assault as well as information concerning injury, if any, to the victim officer.

# Reporting Area

-

f

r

S

d

d

During calendar year 1970, crime reports were received from law enforcement agencies representing 97 percent of the total United States population living in standard metropolitan statistical areas, 88 percent of the population in other cities, and 71 percent of the rural population. The combined coverage accounts for 91 percent of the national population.

Presentation of crime data by areas as used in this publication follows as closely as practical the definitions used by the Office of Management and Budget and the Bureau of the Census for standard metropolitan statistical areas and other cities. There is, however, some deviation insofar as the rural area is concerned. For crime reporting purposes rural is generally the unincorporated portion of a county outside of standard metropolitan statistical areas. In addition, statistics are presented in certain tables relative to "suburban" areas. A suburban area consists of cities with 50,000 or less population together with counties which are within a standard metropolitan statistical area. In this use of suburban the core city experience is, of course, excluded. The suburban area concept is used because of the particular crime conditions which exist in these communities surrounding the major core cities. These metropolitan areas are not rural in nature, yet neither are they comparable to large cities although they have many of the problems identified with the latter.

Standard metropolitan statistical areas are generally made up of an entire county or counties having at least one core city of 50,000 or more inhabitants, with the whole meeting the requirements of certain metropolitan characteristics. In New England, "town" instead of "county" is used to describe standard metropolitan statistical areas. These towns do not coincide generally with established crime reporting units; therefore, metropolitan state economic areas in New England are used in these area tabulations since they encompass an entire county or counties. Standard metropolitan statistical areas, as used in this publication, make up approximately 69 percent of the total United States population.

Other cities are urban places outside standard metropolitan statistical areas. Most of these places of 2,500 or more inhabitants are incorporated and comprise 12 percent of the 1970 population. Rural areas are made up of the unincorporated portions of counties outside of urban places and standard metropolitan statistical areas and represent 19 percent of our national population. Throughout this Program, sheriffs, county police and many State police report on crimes committed within the limits of the counties but outside cities, while local police report on crime committed within the city limits (urban places).

# **Verification Processes**

Uniformity of crime data collected under this Program is of primary concern to the FBI as the national clearinghouse. With the receipt of reports covering approximately 9,200 jurisdictions, prepared on a voluntary basis, the problems of attaining uniformity are readily apparent. Issuance of instructions does not complete the role of the FBI. On the contrary, it is standard operating procedure to examine each incoming report not only for arithmetical accuracy but also, and possibly of even more importance, for reasonableness as a possible indication of errors.

Variations in the level and ratios among the crime classes established by previous reports of each agency are used as a measure of possible or probable incompleteness or changes in reporting policy. Necessary arithmetical adjustments or unusual variations are brought to the attention of the submitting agency by correspondence. During 1970, 21,250 letters were addressed to contributors primarily as a result of editing and evaluation processes. Correspondence with contributors is the principal tool for supervision of quality. Not only are the individual reports stud-

ied, but also periodic trends for individual reporting units are prepared, as are crime rates in descending order for all units grouped for general comparability to assist in detecting variations and fluctuations possibly due to some reason other than chance. For the most part, the problem is one of keeping the contributors informed of the type information necessary to the success of this Program.

The elimination of duplication of crime reporting by the various agencies is given constant attention. In addition to detailed instructions as to the limits of reporting jurisdictions between sheriffs and police in urban places, lists of urban places by county are furnished to sheriffs, county police and in some instances state police organizations.

Uniform Crime Reporting has been taught to all law enforcement officers attending the FBI National Academy. The Academy was established in 1935 and there are 3,175 graduates who are still in law enforcement, 28 percent of whom are the executive heads of law enforcement agencies. The FBI also presents this subject to regional law enforcement schools throughout the country.

Contacts by Special Agents of the FBI are utilized to enlist the cooperation of new contributors and to explain the purpose of this Program and the methods of assembling information for reporting. When correspondence, including specially designed questionnaires fail, Special Agents may be directed to visit the contributor to affirmatively resolve the misunderstanding.

Variations from the desired reporting standards which cannot be resolved by the steps indicated above are brought to the attention of the Committee on Uniform Crime Records of the IACP. The Committee may designate a representative to make a personal visit to the local department to assist in the needed revision of records and reporting methods.

It is clear, of course, that regardless of the extent of the statistical verification processes used by the FBI, the accuracy of the data assembled under this Program depends upon the degree of sincere effort exerted by each contributor to meet the necessary standards of reporting and, for this reason, the FBI is not in a position to youch for the validity of the reports received.

# The Crime Totals

Communities not represented by crime reports are relatively few, as discussed previously and as shown by an examination of the tables which follow presenting 1970 crime totals for the Index of Crime classifications. The FBI conducts a continuing program to further reduce the unreported areas.

Within each of the three areas—standard metropolitan statistical, other urban and rural—it is assumed that the unreported portion had the same proportionate crime experience as that for which reports were received. In lieu of figures for the entire year from those agencies, reports for as many as 9 months are accepted as sufficiently representative on which to base estimates for the year. Estimates for unreported areas are based on the reported crime experience of similar areas within each state. Certain refinements are made of this basic estimating procedure as the need arises.

# Crime Trends

Crime data for trends are homogeneous to the extent that figures from identical reporting units are used for each of the periods tabulated. In all trend tabulations only those reporting units are used which have provided comparable data for the period under consideration. National, geographic and area trends are always established on the basis of 2 consecutive years. Exclusions from trend computations are made when figures from a reporting unit are obviously inaccurate for any period or when it is ascertained that unusual fluctuations are due to such variables as improved records procedures and not to chance.

As a matter of standard procedure crime trends for individual places are analyzed five times a year by the FBI. Any significant increase or decrease is made the subject of a special inquiry with the contributing agency. In 1970 for example, more than 2,200 letters were sent to police administrators of contributing agencies inquiring as to the reason for significant increases or decreases in pertinent crime classifications. The communication containing this inquiry specifically directs attention to possible changes in records or reporting procedures. When it is found that crime reporting procedures are in part responsible for the difference in the level of crime, the figures for specific crime categories or totals are excluded from the trend tabulations. Year-to-year trends in Uniform Crime Reports are valid and may be used to reasonably establish long-term trends as well as to re-estimate crime volume and reconstruct crime trends for prior years. It can be assumed logically that the current year is the most complete in terms of volume. Trend or percent change as established by comparable units for each 2-year period is then applied as the basis for re-estimating the volume of crime for prior years.

On the other hand, crime rate tables by state and standard metropolitan statistical area contain the most reliable reports available for the current year, and care should be exercised in any direct comparisons with prior issues. Changes in crime level may have been due in part to improved reporting or records procedures rather than to chance.

# Population Data

In computing crime rates by state, geographic division, standard metropolitan statistical area and the Nation as a whole, the 1970 Decennial Census Reports issued by the Bureau of the Census were used. The estimated United States population increase in 1970 was 1 percent over 1969 according to the Decennial Census Reports.

A stumbling block to a uniform national crime reporting system in the United States results from variations in definitions of criminal violations among the states. This obstacle, insofar as uniformity of definitions is concerned, was removed by the adoption of a standard set of crime classifications. To some extent the title of each classification connotes in a general way its content. However, in reading the explanation of each category, it is very important to keep in mind that because of the differences among the state codes there is no possibility in a system such as this to distinguish between crimes by designations such as "felony" and "misdemeanor."

A continuing program is carried out to furnish contributors with timely supplemental instructions as the need arises in certain classifications. These are aimed at the clarification of any misunderstandings which may arise and the redirection of attention to the proper application of classification procedures under this system.

Brief definitions of crime classifications utilized in this Program are listed below:

1. Criminal homicide.—(a) Murder and nonnegligent manslaughter: all willful felonious homicides as distinguished from deaths caused by negligence. Excludes attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides are limited to: (1) the killing of a person by a peace officer in line of duty; (2) the

killing of a person in the act of committing a felony by a private citizen. (b) Manslaughter by negligence: any death which the police investigation establishes was primarily attributable to gross negligence of some individual other than the victim.

- Forcible rape.—Rape by force, assault to rape and attempted rape. Excludes statutory offenses (no force used—victim under age of consent).
- 3. Robbery.—Stealing or taking anything of value from the care, custody or control of a person by force or violence or by putting in fear, such as strong-arm robbery, stickups, armed robbery, assault to rob and attempts to rob.
- 4. Aggravated assault.—Assault with intent to kill or for the purpose of inflicting severe bodily injury by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids, explosives, or other means. Excludes simple assault, assault and battery, fighting, etc.
- 5. Burglary—breaking or entering.—Burglary, housebreaking, safecracking, or any breaking or unlawful entry of a structure with the intent to commit a felony or a theft. Includes attempts.
- 6. Larceny—theft (except auto theft).—(a) Fifty dollars and over in value; (b) under \$50 in value. Thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Excludes embezzlement, "con" games, forgery, worthless checks, etc.
- 7. Auto theft.—Stealing or driving away and abandoning a motor vehicle. Excludes taking for temporary or unauthorized use by those having lawful access to the vehicle.
- 8. Other assaults.—Assaults and attempted assaults which are not of an aggravated nature.
- 9. Arson.—Willful or malicious burning with or without intent to defraud. Includes attempts.
- 10. Forgery and counterfeiting.—Making, altering, uttering or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.
- 11. Fraud.—Fraudulent conversion and obtaining money or property by false pretenses. Includes bad checks except forgeries and counterfeiting.
- 12. Embezzlement.—Misappropriation or misapplication of money or property entrusted to one's care, custody or control.
- 13. Stolen property, buying, receiving, possessing.—Buying, receiving, and possessing stolen property and attempts.

- 14. Vandalism.—Willful or malicious destruction, injury, disfigurement or defacement of property without consent of the owner or person having custody or control.
- 15. Weapons; carrying, possessing, etc.—All violations of regulations or statutes controlling the carrying, using, possessing, furnishing and manufacturing of deadly weapons or silencers. Includes attempts.
- 16. Prostitution and commercialized vice.—Sex offenses of a commercialized nature and attempts, such as prostitution, keeping a bawdy house, procuring or transporting women for immoral purposes.
- 17. Sex offenses (except forcible rape, prostitution, and commercialized vice).—Statutory rape, offenses against chastity, common decency, morals and the like. Includes attempts.
- 18. Narcotic drug laws.—Offenses relating to narcotic drugs, such as unlawful possession, sale or use. Excludes violations limited strictly to Federal control.
- 19. Gambling.—Promoting, permitting, or engaging in gambling.

- 20. Offenses against the family and children.— Nonsupport, neglect, desertion, or abuse of family and children.
- 21. Driving under the influence.—Driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.
- 22. Liquor laws.—State or local liquor law violations, except "drunkenness" (class 23) and "driving under the influence" (class 21). Excludes Federal violations.
  - 23. Drunkenness.—Drunkenness or intoxication.
  - 24. Disorderly conduct.—Breach of the peace.
- 25. Vagrancy.—Vagabondage, begging, loitering, etc.
- 26. All other offenses.—All violations of state or local laws, except classes 1-25 and traffic.
- Suspicion.—Arrests for no specific offense and released without formal charges being placed.
- 28. Curiew and loitering laws (juveniles).—Offenses relating to violation of local curiew or loitering ordinances where such laws exist.
- 29. Runaway (juveniles).—Limited to juveniles taken into protective custody under provisions of local statutes as runaways.

# The Index of Crime, 1970

In this section, tabulations are shown to indicate the probable extent, fluctuation and distribution of crime for the United States as a whole, geographic divisions, individual states and standard metropolitan statistical areas. The measure used is a Crime Index consisting of seven important offenses which are counted as they become known to the law enforcement agencies. Crime classifications used in the Index are: murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary—breaking or entering, larceny \$50 and over and auto theft.

The total number of criminal acts that occur is unknown, but those that are reported to the police provide the first means of a count. Not all crimes come readily to the attention of the police; not all crimes are of sufficient importance to be significant in an index; and not all important crimes occur with enough regularity to be meaningful in an index. With these considerations in mind, the above crimes were selected as a group to furnish

an abbreviated and convenient measure of the crime problem.

It is important to remember in reviewing the tables in this section that the volume of crime in a state or standard metropolitan statistical area is subject to the factors set forth on page vii. The 1970 Decennial Census Reports published by the Bureau of the Census have been used to construct crime rates. With our highly mobile population all communities, metropolitan areas and states are affected to a greater or lesser degree by the element of transient population. This factor is not accounted for in crime rates since no reliable estimates by state are available nationwide.

Tables are presented showing the comparative crime experience by population group of suburban cities having 50,000 or less inhabitants with cities of the same size isolated from suburban areas. The effects of being a part of the metropolitan fringe can be readily discerned by a review of these tables.

<sup>&</sup>lt;sup>1</sup> Violent crime is offenses of murder, forcible rape, robbery, and aggravated assault.

, 473

1, 079 1, 774

1, 200 1, 478

3, 149 3, 180

98 50 72 3,350 316.3

<sup>&</sup>lt;sup>2</sup> Property crime is offenses of burglary, larceny \$50 and over, and auto theft.

For standard metropolitan statistical areas in this table the percentage actually reporting may not coincide with the ratio between reported and estimated crime totals since these data represent the sum of such calculations for individual areas varying in size, portions reporting, and crime rates.

Population is 1970 census.

Table 5.—Index of Crime, 1970, Standard Metropolitan Statistical Areas

<sup>&</sup>lt;sup>1</sup> Violent crime is offenses of murder, forcible rape, robbery and aggravated assault.
<sup>3</sup> Property crime is offenses of burglary, larceny \$50 and over and auto theft.

# General United States Crime Statistics

The data presented in this section are primarily of value to law enforcement executives, news media and others for the purpose of comparing the crime experience of a community with the averages reported nationally by communities of similar size. Crime trends and rates are tabulated by grouping places according to population size. Police performance in clearing crimes by arrest is presented by population group and geographic division.

National city averages are also shown indicating the type and value of the property stolen, by offense and type, and value recovered by police investigation. Robbery, burglary and larcenytheft are examined by type, as well as where and when they occurred. An analysis is provided showing weapons used to commit murders as well as a distribution of murder victims by age, sex, and race. Dispositions made of persons formally charged for all criminal offenses are set forth in Table 15 and disposition data on juvenile offenders is provided by population group in Table 18.

City, suburban and rural arrest rates are shown for all criminal offenses. Arrest rates by population group are also listed for specific offenses. This is another step in building totals for crime categories other than those in the Crime Index and in presenting crimes known to the police through arrests.

Statistical data relating to suburban areas are provided for the use of law enforcement officials in suburban communities in making limited comparisons. Places used to establish totals for suburban areas include cities with 50,000 or less population together with county law enforcement agencies in standard metropolitan statistical areas. Of course, the crime experience of the large core city is excluded.

It is important to remember in studying averages that usually about half the units used must be above and about half below. National averages can provide the police administrator with valuable guidance in analyzing the local crime count, as well as the performance of his force in combating crime. The analysis, however, does not end with such a comparison, for it is only through an appraisal of local conditions that a clear picture of the community crime problem or the effectiveness of the police operation is possible.

# Arrest Data

Tables in the following section provide certain personal characteristics of individuals arrested for all criminal acts. Arrest rates and trends are shown for city, suburban and rural areas, as well as the United States as a whole. Tabulations are published containing characteristics of persons arrested by age, sex and race.

3 = 6

9 3 4

13

10

18 12 10

15

11

3

3 1 1

Arrest statistics are collected annually from contributing law enforcement agencies and the figures used in the tables this year were submitted by agencies representing 75 percent of the United States population. In using these arrest figures it is important to remember that the same person may be arrested several times during 1 year for the same type or for different offenses. Each arrest is counted. Further, the arrest of one person may solve several crimes and, in other instances, two

or more persons may be arrested during the solution of one crime.

Arrests are primarily a measure of police activity, as it relates to crime. Although police arrest practices vary, particularly with respect to juveniles, contributors to this Program are instructed to count one arrest each time an individual is taken into custody for committing a specific crime. A juvenile is counted as a person arrested when he commits an offense and the circumstances are such that if the offender were an adult, an arrest would be made.

Arrest data, while primarily a measure of law enforcement activity, is also a gauge of criminality when used within its limitations, as must be done with all forms of criminal statistics, including court and penal.

#### Total Estimated Arrests,1 United States, 1970

Total	8, 117, 700	Arton	11,900
		Forgery and counterfeiting	55, 500
Criminal homicide:		Fraud	104, 600
Murder and nonnegligent manslaughter	15, 230	Embesslement	10,000
Manslaughter by negligence	4, 190	Stolen property; buying, receiving, possessing	74,000
Forcible rape	19,050	Vandalism	141, 900
Robbery	96, 210	Weapons; carrying, possessing, etc	
Aggravated assault	155,000	Prostitution and commercialized vice	
Burglary-breaking or entering	388, 100	Sex offenses (except forcible rape and prostitution)	59, 700
Larceny-theft	748, 200	Narcotic drug laws	
Auto theft	153, 300	Gambling	91,700
		Offenses against family and children	78, 500
Violent crime	287, 550	Driving under the influence.	588, 700
Property crime	1, 250, 600	Liquor laws	300,000
		Drunkenness.	1, 825, 500
Subtotal for above offenses	1, 551, 300	Disorderly conduct	710,000
		Vagrancy	
Other assaults	346,900	All other offenses (except traffic)	1,042,600
		Suspidion	88, 500
		Curiew and loitering law violations	
		Runaways

# Police Employee Data

This section contains tables relating to police personnel. Figures showing police strength by number of full-time police officers and civilian employees are based on national averages. These figures should not be interpreted as indicating recommended or desirable police strength. Adequate police requirements for a specific place can only be determined following careful study and analysis of the local situation together with a thorough evaluation of the numerous factors which affect local police needs.

Two tables containing police employee rates are set forth. In the first, total employees including civilian personnel are used, whereas in the second table only sworn personnel are used to compute

rates.

The police employee rate ranges in Table 50, which include civilians, show the interquartile range between the upper limits of the lowest quartile and the lower limits of the highest quartile. In other words, 50 percent of the cities shown in each population group and geographic division have a police strength within the rate ranges shown. By arraying rates in this manner, extremes are eliminated.

In Table 51 where rates are published for police officers, complete rate ranges are provided as supplemental data for those who may be interested in using these figures to make limited comparisons.

Another table is presented showing police strength for all state police and state highway patrol organizations. This table is designed to show, by state, the number of miles of state and Federal highway per sworn employee, as well as the number of registered vehicles per officer. These rates are only a rough yardstick as to comparative workload and personnel strength because of widely differing functions and other factors. The wide variations in sworn and civilian personnel among the various states can be accounted for in part by the differences in responsibilities assigned to the departments. It is pointed out, for instance, that state police generally are responsible not only for traffic patrol, but also conduct a major portion of the criminal investigative work in the unincorporated areas of the states. On the other hand, the activities of the state highway patrol organizations for the most part are limited to traffic and highway patrol, which includes handling all types of crime which come to their attention during the performance of their patrol functions. Many of these state highway patrol groups also are authorized to and do participate in criminal investigative work when requested to do so by local departments or sheriffs' offices.

The annual collection of police employee data provides figures for police killed and assaulted. Collection of these data is supplemented with respect to police killed in the line of duty through the use of a special questionnaire, by means of which additional details on this important subject are accumulated. Data relative to police killed and assaulted are also presented in the Summary Section of this publication.
